Volume 18:
Four Carbon—Heteroatom Bonds: $X\equiv C\equiv X$, $X\equiv C=\equiv X$, $X_2C=\equiv X$, $C\equiv X$

Preface ................................................................ V

Volume Editor’s Preface .............................................. VII

Table of Contents ........................................................ XI

Introduction
J. G. Knight ............................................................... 1

18.1 Product Class 1: Cyanogen Halides, Cyanates and Their Sulfur, Selenium, and Tellurium Analogues, Sulfinyl and Sulfonyl Cyanides, Cyanamides, and Phosphaalkynes
Y.-Q. Wu ................................................................. 17

18.2 Product Class 2: Carbon Dioxide, Carbonyl Sulfide, Carbon Disulfide, Isocyanates, Isothiocyanates, Carbodiimides, and Their Selenium, Tellurium, and Phosphorus Analogues
S. Braverman, M. Cherkinsky, and M. L. Birsa ........................................ 65

18.3 Product Class 3: Carbonic Acid Halides
J.-P. G. Senet ............................................................. 321

18.4 Product Class 4: Acyclic and Cyclic Carbonic Acids and Esters, and Their Sulfur, Selenium, and Tellurium Analogues
K. W. Jung and A. S. Nagle ................................................ 379

18.5 Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides ........................................ 451

18.6 Product Class 6: Acyclic and Cyclic Carbamic Acids and Esters, and Their Sulfur, Selenium, Tellurium, and Phosphorus Analogues
L. Rossi ................................................................... 461

18.7 Product Class 7: Polymeric Carbamic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides ........................................ 649

18.8 Product Class 8: Acyclic and Cyclic Ureas
G. Sartori and R. Maggi ................................................... 665

18.9 Product Class 9: Polymeric Ureas and Their Phosphorus Analogues
G. Guichard .............................................................. 759

Introduction
J. G. Knight

Introduction .......................................................................................................................... 1

18.1 Product Class 1: Cyanogen Halides, Cyanates and Their Sulfur, Selenium, and Tellurium Analogues, Sulfinyl and Sulfonyl Cyanides, Cyanamides, and Phosphaalkynes
Y.-Q. Wu

18.1 Product Class 1: Cyanogen Halides, Cyanates and Their Sulfur, Selenium, and Tellurium Analogues, Sulfinyl and Sulfonyl Cyanides, Cyanamides, and Phosphaalkynes ...................................................... 17

18.1.1 Product Subclass 1: Cyanogen Halides ..................................................................... 17

18.1.1.1 Synthesis of Product Subclass 1 ........................................................................ 17

18.1.1.1 Method 1: By Halogenation of Cyanides .............................................................. 17

18.1.1.2 Method 2: Cyanogen Fluoride by Pyrolysis of 2,4,6-Trifluoro-1,3,5-triazine .......... 18

18.1.1.2 Applications of Product Subclass 1 in Organic Synthesis ................................. 19

18.1.1.2.1 Method 1: Cleavage of Carbon–Heteroatom Bonds ......................................... 19

18.1.1.2.2 Method 2: Formation of Heterocyclic Rings .................................................... 20

18.1.1.2.3 Method 3: As Cyanating Reagents ................................................................... 21

18.1.2 Product Subclass 2: Cyanates and Their Sulfur, Selenium, and Tellurium Analogues ................................................. 22

18.1.2.1 Synthesis of Product Subclass 2 ........................................................................ 22

18.1.2.1.1 Method 1: By Nucleophilic Reactions from Cyanate Salts .............................. 22

18.1.2.1.2 Method 2: By Cyanation .................................................................................. 24

18.1.2.1.2.1 Variation 1: Of Alcohols, Phenols, and Related Compounds with Cyanogen Halides .................................................................................................................. 24

18.1.2.1.2.2 Variation 2: Of Halogenated Precursors with Cyanides ............................. 25

18.1.2.1.2.3 Variation 3: Thiocyanates from Sodium Sulfinate or Sulfonyl Chlorides ....... 26

18.1.2.1.3 Method 3: Thiocyanates and Selenocyanates from Trimethylsilyl Isothiocyanates and Isoselenocyanates ......................... 27

18.1.2.1.4 Method 4: Thiocyanates and Selenocyanates from Thiocyanogen and Selenocyanogen ......................................................................................................................... 28

18.1.2.2 Applications of Product Subclass 2 in Organic Synthesis .................................. 30

18.1.2.2.1 Method 1: Formation of Heterocyclic Compounds ......................................... 30

18.1.2.2.2 Method 2: Cyanates and Thiocyanates as Cyanating Reagents ..................... 30

18.1.2.2.3 Method 3: Addition of Thiocyanates or Selenocyanates to Aldehydes and Alkene Double Bonds .................................................................................................................. 31
18.1.3 Product Subclass 3: Sulfinyl and Sulfonyl Cyanides

18.1.3.1 Synthesis of Product Subclass 3

18.1.3.1.1 Method 1: By Oxidation of Thiocyanates

18.1.3.1.2 Method 2: By Cyanation of Sulfinate Salts and Sulfonyl Chlorides

18.1.3.2 Applications of Product Subclass 3 in Organic Synthesis

18.1.3.2.1 Method 1: Sulfonyl Cyanides as Cyanating Reagents

18.1.3.2.2 Method 2: Formation of Heterocyclic Compounds from Sulfonyl Cyanides

18.1.4 Product Subclass 4: Cyanamides and Their Derivatives

18.1.4.1 Synthesis of Product Subclass 4

18.1.4.1.1 Method 1: By Alkylation of Cyanamide

18.1.4.1.2 Method 2: By Cyanation of Amines

18.1.4.1.2.1 Variation 1: With Cyanogen Halides

18.1.4.1.2.2 Variation 2: With Other Cyanating Reagents

18.1.4.1.2.3 Variation 3: By Cyanation of Halo Amines with Cyanides

18.1.4.1.3 Method 3: By Elimination from Ureas and Thioureas

18.1.4.1.4 Method 4: By Rearrangement Reactions

18.1.4.1.4.1 Variation 1: From Amidoximes by a Modified Tiemann Rearrangement

18.1.4.1.4.2 Variation 2: From N,N-Disubstituted Formamides by a Curtius-like Rearrangement

18.1.4.1.4.3 Variation 3: By Palladium-Catalyzed Coupling of Isocyanides, Allyl Carbonate, and Trimethylsilyl Azide through a Curtius-like Rearrangement

18.1.4.1.5 Method 5: By Decomposition of Heterocyclic Compounds

18.1.4.1.6 Method 6: Palladium-Catalyzed Formation of N,N-Diallyl Cyanamides

18.1.4.1.7 Method 7: Lewis Acid Catalyzed Reactions of Carbonyl Groups with N,N'-Bis(trimethylsilyl)carbodiimide

18.1.4.2 Applications of Product Subclass 4 in Organic Synthesis

18.1.4.2.1 Method 1: Formation of Heterocyclic Compounds

18.1.4.2.2 Method 2: Nucleophilic and Electrophilic Additions of Cyanamides

18.1.4.2.3 Method 3: The Cyanamide Group as a Protected Amine Group

18.1.5 Product Subclass 5: Cyanophosphines and Cyanophosphonates and Their Derivatives

18.1.5.1 Synthesis of Product Subclass 5

18.1.5.1.1 Method 1: By Cyanation

18.1.5.1.1.1 Variation 1: Of Phosphines and Phosphites with Cyanogen Halides

18.1.5.1.1.2 Variation 2: Of Halophosphorus Precursors with Cyanides

18.1.5.1.1.3 Variation 3: Of Halophosphorus Precursors with Trimethylsilyl Cyanide

18.1.5.1.1.4 Variation 4: Of Pyrophosphites with Alkyl Thiocyanates

18.1.5.2 Applications of Product Subclass 5 in Organic Synthesis

18.1.5.2.1 Method 1: Diethyl Cyanophosphonate as a Coupling Reagent in Acylation Reactions

18.1.5.2.1.1 Variation 1: Formation of Amides, Esters, and Thioesters

18.2.4.1 Synthesis of Product Subclass 4 ...................................................... 84
18.2.4.1.1 Method 1: Carbonylation of Primary Amines with Phosgene ................ 84
18.2.4.1.2 Method 2: Carbonylation of Amines with Carbon Dioxide .................. 88
18.2.4.1.2.1 Variation 1: Isocyanates from Primary Amines and Carbon Dioxide; Dehydration of Carbamate Anions ........................................ 89
18.2.4.1.2.2 Variation 2: Isocyanates from Primary Amines and Carbon Dioxide Using Mitsunobu Chemistry ........................................ 90
18.2.4.1.3 Method 3: Carbonylation of Primary Amines with Other Carbonyl Transfer Agents .................................................. 91
18.2.4.1.3.1 Variation 1: Carbonylation by Bis(trichloromethyl) Carbonate .............. 91
18.2.4.1.3.2 Variation 2: Carbonylation by Di-tert-butyl Dicarbonate .................. 92
18.2.4.1.3.3 Variation 3: Carbonylation by Trichloromethyl Chloroformate .............. 94
18.2.4.1.3.4 Variation 4: Carbonylation by 1,1'-Carbonyldiimidazole ..................... 96
18.2.4.1.3.5 Variation 5: Carbonylation by Oxalyl Chloride ................................ 96
18.2.4.1.4 Method 4: Carbonylation of Amine Derivatives ................................ 98
18.2.4.1.4.1 Variation 1: Carbonylation of Iminophosphoranes ............................ 98
18.2.4.1.4.2 Variation 2: Carbonylation of N-Silylamines ................................... 99
18.2.4.1.4.3 Variation 3: Carbonylation of Ureas ........................................... 101
18.2.4.1.4.4 Variation 4: Carbonylation of Sulfonamides ................................... 103
18.2.4.1.4.5 Variation 5: Carbonylation of Imino Compounds ............................ 104
18.2.4.1.4.6 Variation 6: Carbonylation of N-Sulfinylamines .............................. 105
18.2.4.1.5 Method 5: Reductive Carbonylation of Nitro Aromatic Compounds .......... 106
18.2.4.1.6 Method 6: From Organic Halides and Sulfates .................................. 107
18.2.4.1.6.1 Variation 1: By the Reaction of Organic Halides with Cyanate Anion .... 108
18.2.4.1.6.2 Variation 2: By Reaction with Metal Nitrocyranamides ........................................... 109
18.2.4.1.7 Method 7: From Carbamates .......................................................... 110
18.2.4.1.7.1 Variation 1: Thermal Decomposition of Carbamates ........................................ 110
18.2.4.1.7.2 Variation 2: Silane-Induced Cleavage of Carbamates .............................. 111
18.2.4.1.7.3 Variation 3: Cleavage of Carbamates with Boron Derivatives ..................... 113
18.2.4.1.7.4 Variations 4: Additional Variations ............................................. 114
18.2.4.1.8 Method 8: From Thiocarbamates .................................................... 115
18.2.4.1.8.1 Variation 1: From S-Alkyl Thiocarbamates ........................................ 115
18.2.4.1.8.2 Variation 2: From O-Alkyl Thiocarbamates ...................................... 117
18.2.4.1.9 Method 9: Thermolysis of Ureas .................................................... 117
18.2.4.1.10 Method 10: By Cleavage of Nitrogen Heterocycles .................................... 118
18.2.4.1.10.1 Variation 1: From Three-Membered Nitrogen Heterocycles ................. 118
18.2.4.1.10.2 Variation 2: From Four-Membered Nitrogen Heterocycles .................. 119
18.2.4.1.10.3 Variation 3: From Five-Membered Nitrogen Heterocycles .................. 120
18.2.4.1.11 Method 11: From N-Substituted Trihaloacetamides ............................. 122
18.2.4.1.12 Method 12: By the Addition of Isocyanic Acid and Its Derivatives to Alkenes .......................................................... 122
18.2.4.1.12.1 Variation 1: Addition of Isocyanic Acid ........................................ 122
18.2.4.1.12.2 Variation 2: Addition of Iodine Isocyanate ..................................... 123
18.2.4.1.13 Method 13: Curtius Rearrangement .................................................. 124
18.2.4.1.13.1 Variation 1: Using Sodium Azide ................................................ 124
18.2.4.1.13.2 Variation 2: Using Trimethylsilyl Azide ........................................ 125
18.2.4.1.13.3 Variation 3: Using Diphenyl Azidophosphate .................................... 130
18.2.4.1.14 Method 14: Hofmann Rearrangement ............................................... 131
18.2.4.1.15 Method 15: Lossen Rearrangement ................................................ 132
18.2.4.1.16 Method 16: From Aminimides ...................................................... 133
18.2.4.1.17 Method 17: Sigmatropic Rearrangements ........................................... 135
18.2.4.1.18 Method 18: By Oxidation ............................................................... 138
18.2.4.1.19 Method 19: Via Isomerization of Nitrile Oxides ................................... 140
18.2.4.1.20 Method 20: Preparation of Functionalized Isocyanates from Other Isocyanates .......................................................... 141
18.2.4.1.20.1 Variation 1: By Substitution Reactions ........................................... 141
18.2.4.1.20.2 Variation 2: By Addition to a Double Bond ..................................... 144
18.2.4.1.20.3 Variation 3: Trimethylsilyl Isocyanate in the Synthesis of Isocyanates ...... 144
18.2.4.1.20.4 Variation 4: Chlorocarbonyl Isocyanate ........................................ 146
18.2.4.1.20.5 Variation 5: Sulfonyl Isocyanates ................................................ 147
18.2.4.2 Applications of Product Subclass 4 in Organic Synthesis ..................................... 148
18.2.4.2.1 Method 1: Nucleophilic Additions .................................................. 149
18.2.4.2.1.1 Variation 1: Reactions with Heteroatom Nucleophiles .......................... 149
18.2.4.2.1.2 Variation 2: Reactions with Carbon Nucleophiles ............................. 150
18.2.4.2.2 Method 2: Cycloaddition Reactions .................................................. 154
18.2.4.2.2.1 Variation 1: [2 + 2]-Cycloaddition Reactions ..................................... 154
18.2.4.2.2.2 Variation 2: [2 + 4]-Cycloaddition Reactions ..................................... 156
18.2.4.2.2.3 Variation 3: [2 + 3]-Cycloaddition Reactions ..................................... 158
18.2.4.2.2.4 Variation 4: Cyclodimerization and Cyclotrimerization of Isocyanates ...... 160
18.2.4.2.3 Method 3: Reactions of Isocyanates with Iminophosphoranes .................... 161
18.2.4.2.4 Method 4: Friedel–Crafts Reactions of Isocyanates ................. 162
18.2.5 Product Subclass 5: 1-Oxa-3-phosphapropadienes and 1-Phospha-3-thiapropadienes ........................................... 164
18.2.5.1 Synthesis of Product Subclass 5 ........................................... 164
18.2.5.1.1 Method 1: Phosgenation and Thiophosgenation of Disilylated Phosphines .................................... 164
18.2.5.2 Applications of Product Subclass 5 in Organic Synthesis ................. 166
18.2.5.2.1 Method 1: Synthesis of 1-Phosphapropadiene by a Wittig-Type Reaction 167
18.2.5.2.2 Method 2: Synthesis of Polyphosphadienes .................................. 167
18.2.5.2.3 Method 3: Photochemical and Metal-Catalyzed Decarbonylation of 1-Oxa-3-phosphapropadiene .......................................... 168
18.2.6 Product Subclass 6: Carbon Disulfide ........................................ 169
18.2.6.1 Applications of Product Subclass 6 in Organic Synthesis ................. 170
18.2.6.1.1 Method 1: Reactions with Oxygen Nucleophiles ....................... 170
18.2.6.1.1.1 Variation 1: Synthesis of Orthocarbonic Acid Derivatives ............... 170
18.2.6.1.1.2 Variation 2: Synthesis of Dithiocarbonates .......................... 170
18.2.6.1.1.3 Variations 3: Additional Variations ...................................... 171
18.2.6.1.2 Method 2: Reactions with Sulfur Nucleophiles .......................... 172
18.2.6.1.2.1 Variation 1: Synthesis of Trithiocarbonates .......................... 172
18.2.6.1.2.2 Variation 2: Synthesis of Tetrathiomalonic Acid Derivatives ............... 173
18.2.6.1.3 Method 3: Reactions with Nitrogen Nucleophiles ...................... 174
18.2.6.1.3.1 Variation 1: Synthesis of Dithiocarbamates .......................... 174
18.2.6.1.3.2 Variation 2: Synthesis of Thioureas .................................... 175
18.2.6.1.3.3 Variation 3: Synthesis of Isothiocyanates ............................... 176
18.2.6.1.3.4 Variation 4: Synthesis of Heterocycles via Amine Derivatives Bearing an Additional Nucleophilic Group .................. 177
18.2.6.1.4 Method 4: Reactions with Carbon Nucleophiles ....................... 177
18.2.6.1.4.1 Variation 1: Synthesis of Thiocarboxylic Acid Derivatives ............... 177
18.2.6.1.4.2 Variation 2: Synthesis of Dithiocarboxylic Acid Derivatives ............... 178
18.2.6.1.4.3 Variation 3: Synthesis of Ketene Dithioacetals .......................... 179
18.2.6.1.4.4 Variation 4: Synthesis of Thiocarbamates .......................... 181
18.2.6.1.4.5 Variation 5: Synthesis of Thioamides .................................. 182
18.2.6.1.5 Method 5: Reactions with Organosilicon Compounds ................. 183
18.2.6.1.6 Method 6: Carbon Disulfide in Cycloaddition Reactions ................. 183
18.2.6.1.7 Method 7: Carbon Disulfide in Aza-Wittig-Type Reactions ................. 185
18.2.6.1.8 Method 8: Carbon Disulfide as a Protecting Group ...................... 186
18.2.6.1.9 Method 9: Carbon Disulfide as a Reducing Agent ...................... 186
18.2.6.1.10 Methods 10: Additional Applications .................................... 187
18.2.7 Product Subclass 7: Carbon Sulfide Selenide ..................................... 187
18.2.7.1 Synthesis of Product Subclass 7 ........................................... 187
18.2.7.1.1 Method 1: Via N,N-Dimethylselenothiocarbamates .......................... 187
18.2.8 Product Subclass 8: Isothiocyanates ..................................... 188
18.2.8.1 Synthesis of Product Subclass 8 ........................................... 189
18.2.1 Method 1: By Thiocarbonylation of Primary Amines with Thiophosgene 189

18.2.1.1 Variation 1: In Biphasic Systems ........................................ 189
18.2.1.2 Variation 2: In Organic Solvents ........................................... 190

18.2.1.2 Method 2: By Thiocarbonylation of Primary Amines with Carbon Disulfide via Cleavage of Dithiocarbamate Salts or Esters 191

18.2.1.2.1 Variation 1: Cleavage with Heavy Metal Salts ........................ 191
18.2.1.2.2 Variation 2: Cleavage under Oxidative Conditions .................... 192
18.2.1.2.3 Variation 3: Cleavage by Phosphorus Derivatives ...................... 193
18.2.1.2.4 Variation 4: Cleavage by Alkyl Chloroformates ....................... 195
18.2.1.2.5 Variation 5: Cleavage with Carbodiimides ............................. 196
18.2.1.2.6 Variation 6: Cleavage of Alkyl Esters of Dithiocarbamates .......... 198
18.2.1.2.7 Variation 7: Additional Variations ..................................... 199

18.2.1.3 Method 3: Thiocarbonylation of Primary Amines with Other Thiocarbonyl Transfer Agents 200

18.2.1.4 Method 4: Thiocarbonylation of Amine Derivatives ...................... 201

18.2.1.4.1 Variation 1: Thiocarbonylation of Amide Anions ...................... 202
18.2.1.4.2 Variation 2: Thiocarbonylation of Iminophosphoranes ................ 203

18.2.1.5 Method 5: By Nucleophilic Substitution of Organic Halides with Thiocyanate Anion 204

18.2.1.5.1 Variation 1: Alkyl and Aryl Isothiocyanates .......................... 205
18.2.1.5.2 Variation 2: Acyl, Thioacyl, and Imidoyl Thiocyanates ............... 208
18.2.1.5.3 Variation 3: Sugar Isothiocyanates .................................... 210
18.2.1.5.4 Variation 4: Alkyl and Allenyl Isothiocyanates ....................... 211
18.2.1.5.5 Variation 5: Solid-Phase Synthesis ..................................... 213
18.2.1.5.6 Variation 6: Silyl Isothiocyanates ..................................... 214
18.2.1.6 Method 6: By the Addition of Thiocyanic Acid and Its Derivatives to Alkenes and Alkynes 215

18.2.1.6.1 Variation 1: Addition of Thiocyanic Acid and Its Derivatives to Alkenes 215
18.2.1.6.2 Variation 2: Addition of Iodine Thiocyanate and Selenyl Thiocyanates to Alkenes ............................. 217

18.2.1.6.3 Variation 3: Addition of Thiocyanic Acid and Its Derivatives to Alkynes ........................................... 218

18.2.1.7 Method 7: By Cleavage of Nitrogen and Sulfur Containing Heterocycles 219

18.2.1.8 Method 8: By Cleavage of Nitrogen-Containing Heterocycles .......... 222
18.2.1.9 Method 9: By Direct Sulfurization of Isocyanides .......................... 224
18.2.1.10 Method 10: Isothiocyanates from Aldehydes and Ketones ............... 225

18.2.1.11 Method 11: Preparation of Functionalized Isothiocyanates from Other Isothiocyanates ................................................... 226

18.2.1.11.1 Variation 1: Isothiocyanates by Substitution Reactions of Isothiocyanates 226
18.2.1.11.2 Variation 2: Alkenyl Isothiocyanates by Elimination Reactions of Isothiocyanates ................................................. 228

18.2.1.12 Method 3: Addition Reactions of Alkenyl Isothiocyanates ............... 229

18.2.1.12 Methods 12: Additional Methods ....................................... 230

18.2.1.12.1 Method 1: Nucleophilic Additions .................................... 232
18.2.1.12.2 Method 1: Reactions with Heteroatom Nucleophiles ................ 232
18.2.1.12.2 Method 2: Reactions with Carbon Nucleophiles ..................... 232

18.2.2 Applications of Product Subclass 8 in Organic Synthesis ................. 232

18.2.2.1 Method 1: Nucleophilic Additions .................................... 232
18.2.2.1.1 Variation 1: Reactions with Heteroatom Nucleophiles ................ 232
18.2.2.1.2 Variation 2: Reactions with Carbon Nucleophiles ..................... 232
18.2.8.2.2 Method 2: Cycloaddition Reactions ........................................... 235
18.2.8.2.2.1 Variation 1: [2 + 2]-Cycloaddition Reactions ........................ 235
18.2.8.2.2.2 Variation 2: [2 + 4]-Cycloaddition Reactions ........................ 236
18.2.8.2.2.3 Variation 3: [2 + 3]-Cycloaddition Reactions ........................ 238
18.2.8.2.3 Method 3: Synthesis of Carbodiimides by Reaction with
Iminophosphoranes ................................................... 239
18.2.8.2.4 Method 4: Synthesis of Thioamides by Friedel–Crafts Reaction .... 240
18.2.8.2.5 Method 5: Reduction of Isothiocyanates ................................ 242

18.2.9 Product Subclass 9: Carbon Diselenide ........................................... 243
18.2.9.1 Synthesis of Product Subclass 9 ............................................. 243
18.2.9.1.1 Method 1: Reaction of Selenium with Dichloromethane .......... 243
18.2.9.2 Applications of Product Subclass 9 in Organic Synthesis .......... 244
18.2.9.2.1 Method 1: Synthesis of Diselenocarbonates .......................... 244
18.2.9.2.2 Method 2: Synthesis of Triselenocarbonates ........................... 244
18.2.9.2.3 Method 3: Synthesis of Diselenocarbamates .......................... 245
18.2.9.2.4 Method 4: Synthesis of Isoselenocyanates ............................ 245
18.2.9.2.5 Method 5: Synthesis of Selenoureas .................................... 246
18.2.9.2.6 Method 6: Synthesis of Ketene Diselenocacetals .................... 246
18.2.9.2.7 Method 7: Cycloaddition Reactions Involving Carbon Diselenide ... 246
18.2.9.2.8 Method 8: Polymerization of Carbon Diselenide ................... 247
18.2.9.2.9 Methods 9: Additional Applications .................................... 247

18.2.10 Product Subclass 10: Isoselenocyanates ....................................... 248
18.2.10.1 Synthesis of Product Subclass 10 ......................................... 249
18.2.10.1.1 Method 1: By Nucleophilic Substitution of Organic Halides with
Selenocyanate Anion ................................................ 249
18.2.10.1.1.1 Variation 1: Alkyl Isoselenocyanates ............................... 249
18.2.10.1.1.2 Variation 2: Acyl and Imidoyl Isoselenocyanates ............... 250
18.2.10.1.1.3 Variation 3: Isoselenocyanates by Isomerization of Selenocyanates .... 251
18.2.10.1.1.4 Variation 4: Silyl Isoselenocyanates ............................... 252
18.2.10.1.2 Method 2: By Addition Reactions of Isocyanides with Elemental Selenium 252
18.2.10.1.2.1 Variation 1: Reaction of Preformed Isocyanides with Elemental Selenium 252
18.2.10.1.2.2 Variation 2: Via "In Situ" Formation of Isocyanides ............... 253
18.2.10.1.3 Method 3: From Primary Amines and Carbon Diselenide via
Diselenocarbamates .................................................. 254
18.2.10.1.4 Method 4: From Imidoyl Dihalides ..................................... 255
18.2.10.1.5 Methods 5: Additional Methods ....................................... 256
18.2.10.2 Applications of Product Subclass 10 in Organic Synthesis .......... 257
18.2.10.2.1 Method 1: Reactions with Nucleophiles ............................. 257
18.2.10.2.1.1 Variation 1: Reactions with Heteroatom Nucleophiles ........... 257
18.2.10.2.1.2 Variation 2: Reactions with Carbon Nucleophiles ............. 258
18.2.10.2.2 Method 2: Cycloaddition Reactions of Isoselenocyanates ......... 259

18.2.11 Product Subclass 11: Isotellurocyanates ....................................... 261

18.2.12 Product Subclass 12: Carbodiimides ............................................ 261
18.2.12.1 Synthesis of Product Subclass 12 .................................................. 262
18.2.12.1.1 Method 1: Via Imidoyl Dihalides ........................................ 262
18.2.12.1.2 Method 2: Via N,N'-Disubstituted Ureas, Thioureas, and Selenoureas 263
18.2.12.1.2.1 Variation 1: Using Phosphorus Reagents .............................. 263
18.2.12.1.2.2 Variation 2: Using Oxidative Reagents ............................. 264
18.2.12.1.2.3 Variation 3: Using Sulfonyl Chlorides ................................ 265
18.2.12.1.2.4 Variation 4: Using Acid Chlorides ..................................... 265
18.2.12.1.2.5 Variation 5: Using Pyridine and Pyrimidine Derivatives ............ 266
18.2.12.1.2.6 Variation 6: Using Bases and Organometallic Compounds .......... 266
18.2.12.1.2.7 Variation 7: Using (Dichloromethylene)dimethylammonium Chloride 267
18.2.12.1.3 Method 3: Via Iminophosphoranes ................................... 268
18.2.12.1.3.1 Variation 1: Aza-Wittig-Type Reaction of Iminophosphoranes with Heterocumulenes ............................................. 268
18.2.12.1.3.2 Variation 2: Synthesis Using Di-tert-butyl Dicarbonate ............ 268
18.2.12.1.4 Method 4: Via Isocyanates ................................................. 269
18.2.12.1.4.1 Variation 1: Reaction of Isocyanates with Phosphoramidates and Metal Organosilanolates ........................................... 269
18.2.12.1.4.2 Variation 2: Catalytic Condensation of Isocyanates ............... 270
18.2.12.1.5 Method 5: Via Isocyanides .................................................. 270
18.2.12.1.6 Method 6: Via Rearrangements .......................................... 271
18.2.12.1.6.1 Variation 1: Photochemical Rearrangement of Nitrilimines .......... 271
18.2.12.1.6.2 Variation 2: Rearrangements of Azides ................................ 271
18.2.12.1.6.3 Variation 3: Tiemann Rearrangements of Amidoximes .............. 272
18.2.12.1.7 Method 7: Synthesis of Organometallic Carbodiimides .............. 273
18.2.12.1.7.1 Variation 1: Synthesis of Silylcarbodiimides ........................ 273
18.2.12.1.7.2 Variation 2: Synthesis of Germylcarbodiimides .................... 273
18.2.12.1.7.3 Variation 3: Synthesis of Stannylcarbodiimides ................... 274
18.2.12.1.8 Methods 8: Additional Methods .......................................... 275
18.2.12.2 Applications of Product Subclass 12 in Organic Synthesis ............. 275
18.2.12.2.1 Method 1: Reactions of Carbodiimides with Nucleophiles ............ 275
18.2.12.2.2 Method 2: Carbodiimides in Cycloaddition Reactions ................ 276
18.2.13 Product Subclass 13: 1-Aza-3-phosphapropadienes .......................... 277
18.2.13.1 Synthesis of Product Subclass 13 ........................................... 278
18.2.13.1.1 Method 1: Hexaalkyldisiloxane Elimination from Phosphaurea Derivatives ......................................................... 278
18.2.13.1.2 Method 2: Peterson Alkenation Using Isocyanates ..................... 278
18.2.13.2 Applications of Product Subclass 13 in Organic Synthesis ............. 279
18.2.13.2.1 Method 1: Hydrolysis of 1-Aza-3-phosphapropadienes ................ 279
18.2.13.2.2 Method 2: 1-Aza-3-phosphapropadienes in Cycloaddition Reactions 280
18.2.14 Product Subclass 14: 1\(^{5}\),3\(^{5}\)-Diphosphapropadienes (Carbodiphosphoranes) ........................................ 282
18.2.14.1 Synthesis of Product Subclass 14 ............................................ 283
18.2.14.1.1 Method 1: Reaction of Phosphines with Carbon Tetrachloride ........ 283
18.2.14.2 Method 2: Dehydrohalogenation of Phosphonium Salts ................ 284
18.2.14.2 Applications of Product Subclass 14 in Organic Synthesis .......... 286
18.2.15 Product Subclass 15: 1,3-Diphosphapropadienes ......................... 286
18.2.15.1 Synthesis of Product Subclass 15 ...................................... 286
18.2.15.1.1 Method 1: Trialkysilanolate Elimination from 1,3-Diphosphapropene ..... 287
18.2.15.1.2 Method 2: Dehydrohalogenation of Halo-1,3-diphosphapropenes ...... 287
18.2.15.1.3 Method 3: Dehalogenation of gem-Dihalodiphosphiranes .......... 288
18.2.15.2 Applications of Product Subclass 15 in Organic Synthesis .......... 289
18.2.15.2.1 Method 1: Synthesis of Sulfur-Containing Diphosphetanes and Diphospholanes ........................................... 289
18.2.15.2.2 Methods 2: Additional Applications .................................. 290

18.3 Product Class 3: Carbonic Acid Halides
J.-P. G. Senet

18.3 Product Class 3: Carbonic Acid Halides ........................................... 321
18.3.1 Product Subclass 1: Carbonic Dihalides ....................................... 330
18.3.1.1 Synthesis of Product Subclass 1 ........................................... 331
18.3.1.1.1 Method 1: By Halogen Exchange ..................................... 331
18.3.1.1.2 Method 2: Through Decomposition of Perhalogenated Carbonates ..... 332
18.3.2 Product Subclass 2: Haloformate Esters ....................................... 334
18.3.2.1 Synthesis of Product Subclass 2 ........................................... 334
18.3.2.1.1 Method 1: By Halogen Exchange ..................................... 334
18.3.2.1.2 Variation 1: Chlorine–Fluorine Exchange ................................ 334
18.3.2.1.2 Variation 2: Chlorine–Bromine Exchange ............................... 335
18.3.2.1.2 Method 2: From α-C-Metalated Aldehydes and Ketones ............ 336
18.3.2.1.3 Method 3: From Hydroxylic Compounds ................................ 339
18.3.2.1.3.1 Variation 1: By the Reaction of Carboxyl Difluoride .............. 339
18.3.2.1.3.2 Variation 2: By the Reaction of Phosgene (Carbonic Dichloride) ........................................... 340
18.3.2.1.3.3 Variation 3: By the Reaction of Bis(trichloromethyl) Carbonate ..... 341
18.3.2.1.4 Method 4: From 1-Haloalkyl Carbonates by Elimination Reactions ...... 343
18.3.2.1.5 Method 5: From Oxiranes by Phosgene Addition ..................... 344
18.3.2.1.6 Method 6: From Carboxyl Compounds by Addition Reactions ....... 345
18.3.2.1.6.1 Variation 1: Reaction of Phosgene with Aldehydes .................. 346
18.3.2.1.6.2 Variation 2: Reaction of Bis(trichloromethyl) Carbonate with Aldehydes ........................................... 348
18.3.2.1.6.3 Variation 3: Zinc-Mediated Reaction of Phosgene with Carbonyl Compounds ........................................... 349
18.3.2.1.7 Method 7: Synthesis with Retention of the Haloformic Acid Groups .... 351
18.3.2.1.7.1 Variation 1: By Radical Chlorination of Alkyl Chloroformate Esters ..... 351
18.3.2.1.7.2 Variation 2: By Zinc-Induced Boord Elimination of Chlorine .......... 353
18.3.2.1.7.3 Variation 3: Rearrangement of 1-Chloroprop-2-enyl Chloroformates ...... 354
18.3.2.1.8 Method 8: From O,S-Disubstituted Thiocarbonates by Chlorination with Sulfuryl Chloride ........................................... 354
18.3.3 **Product Subclass 3: Chlorothioformate S-Esters** ......................................................... 355
18.3.3.1 Synthesis of Product Subclass 3 ................................................................. 356
18.3.3.1.1 Method 1: By Catalytic Decomposition of Alkoxydichloromethylsulfanyl Chlorides ........................................ 356
18.3.3.1.2 Method 2: From Sulfanyl Compounds ...................................................... 356
18.3.4 **Product Subclass 4: Haloselenoformic Se-Acids** ......................................................... 357
18.3.5 **Product Subclass 5: Carbamoyl Halides** ................................................................. 358
18.3.5.1 Synthesis of Product Subclass 5 ................................................................. 358
18.3.5.1.1 Method 1: By Halogen Exchange ......................................................... 358
18.3.5.1.2 Method 2: From N,N-Bis(C-substituted) Nitrogen Compounds .......... 359
18.3.5.1.2.1 Variation 1: By the Reaction of Phosgene with Secondary Amines ........ 359
18.3.5.1.2.2 Variation 2: By the Reaction of Bis(trichloromethyl) Carbonate with Secondary Amines ........................................ 360
18.3.5.1.2.3 Variation 3: By the Reaction of Phosgene with Imines ...................... 361
18.3.5.1.2.4 Variation 4: By the Reaction of Phosgene with Formamidines ............ 362
18.3.5.1.2.5 Variation 5: By the Reaction of Phosgene with N-Carbonyl Compounds .... 363
18.3.5.1.2.6 Variation 6: By the Reaction of Bis(trichloromethyl) Carbonate with N-Carbonyl Compounds ......................................................... 364
18.3.5.1.3 Method 3: By the Reaction of Phosgene with Hydroxylamines .......... 365
18.3.5.1.4 Method 4: By N-Dealkylation of Tertiary Amines .................................. 366
18.3.5.1.5 Method 5: By Chlorination of N,N-Disubstituted Carbamic Acid Derivatives ................................................................. 368
18.3.5.1.5.1 Variation 1: From Carbamates Generated from Secondary Amines and Carbon Dioxide in the Presence of a Tertiary Amine Base ...... 368
18.3.5.1.5.2 Variation 2: From N,N-Dialkylcarbamic Acid Silyl Esters Generated from N-Silyl Secondary Amines and Carbon Dioxide ................. 369
18.3.5.1.5.3 Variation 3: From N,N-Dialkylcarbamic Acid Alkyl Esters .................. 370
18.3.5.1.6 Method 6: From (Carbamoyl)palladium(II) Complexes Using Carbon Monoxide and Chlorine ......................................................... 370
18.3.5.1.7 Method 7: From 1-Haloalkyl Carbamates by Elimination Reactions ...... 371
18.3.6 **Product Subclass 6: P-Halocarbonyl Organophosphorus Compounds** .................. 372
18.3.6.1 Synthesis of Product Subclass 6 ................................................................. 372
18.3.6.1.1 Method 1: From Primary and Secondary Phosphines with Phosgene ...... 372
18.3.6.1.2 Method 2: From Trialkyl Phosphites with Phosgene [or Bis(trichloromethyl) Carbonate] by the Arbuzov Reaction ............................ 373

18.4 **Product Class 4: Acyclic and Cyclic Carbonic Acids and Esters, and Their Sulfur, Selenium, and Tellurium Analogues**
K. W. Jung and A. S. Nagle

18.4.1 **Product Subclass 1: Carbonic Acid Monoesters** .................................................. 380
18.4.1.1 Synthesis of Product Subclass 1 ................................................................. 380
18.4.2 Product Subclass 2: Organometallic Derivatives and Metal Salts of Carbonic Acid Monoesters

18.4.2.1 Synthesis of Product Subclass 2

18.4.2.1.1 Method 1: Addition of Metal Alkoxides to Carbon Dioxide

18.4.2.2 Applications of Product Subclass 2 in Organic Synthesis

18.4.2.2.1 Method 1: Carboxylations Using Magnesium Methyl Carbonate

18.4.3 Product Subclass 3: Acyclic Carbonate Diesters

18.4.3.1 Synthesis of Product Subclass 3

18.4.3.1.1 Method 1: Addition of Alcohols to Formate Derivatives

18.4.3.1.2 Variation 1: Addition of Aldehydes or Ketones

18.4.3.1.2 Variation 2: Synthesis Using Dialkyl Azodicarboxylates

18.4.3.1.2 Method 2: Transfer of the Carbonyl Group to Alcohols

18.4.3.1.2 Variation 1: Coupling Using 1,1'-Carbonyldiimidazole

18.4.3.1.2 Variation 2: Transcarbonylation Using Dimethyl or Diethyl Carbonate

18.4.3.1.3 Method 3: Addition to Carbon Dioxide

18.4.3.1.3 Variation 1: Synthesis Using Diethyl Azodicarboxylate

18.4.3.1.4 Method 4: Addition to Carbon Monoxide

18.4.3.1.5 Method 5: Alkylative Self-Condensation

18.4.3.1.6 Method 6: Coupling Using Urea as a Carbonyl Source

18.4.3.1.7 Method 7: Enzyme-Catalyzed Transcarbonylation

18.4.3.1.8 Method 8: Alkylative Self-Condensation

18.4.4 Product Subclass 4: Cyclic Carbonate Diesters

18.4.4.1 Synthesis of Product Subclass 4

18.4.4.1.1 Method 1: Transfer of the Carbonyl Group to Diols

18.4.4.1.1 Variation 1: Coupling Using 1,1'-Carbonyldiimidazole

18.4.4.1.1 Variation 2: Transcarbonylation Using Dimethyl or Diethyl Carbonate

18.4.4.1.2 Method 2: Addition to Carbon Dioxide

18.4.4.1.2 Variation 1: Reaction Using Halohydrins

18.4.4.1.2 Variation 2: Iodolactonization

18.4.4.1.2 Variation 3: Reaction Using Propargylic Alcohols

18.4.4.1.2 Variation 4: Reaction Using Oxiranes

18.4.4.1.3 Method 3: Addition to Carbon Monoxide

18.4.4.1.4 Method 4: Addition to Carbon Monoxide

18.4.4.2 Applications of Product Subclass 4 in Organic Synthesis

18.4.4.2.1 Method 1: Oxidation of Cyclic Carbonate Diesters to Unsaturated Analogues

18.4.5 Product Subclass 5: Bis(trihaloalkyl) Carbonates

18.4.5.1 Synthesis of Product Subclass 5

18.4.6 Product Subclass 6: Acyclic Carbonic Carboxylic Anhydrides

18.4.6.1 Synthesis of Product Subclass 6

18.4.6.1.1 Method 1: Addition of Acids to Formate Derivatives

18.4.6.1.2 Method 2: Addition of Carbonates to Acid Chlorides

18.4.7 Product Subclass 7: Cyclic Carbonic Carboxylic Anhydrides

18.4.7.1 Synthesis of Product Subclass 7
18.4.18.1.3 Method 3: Rearrangements ........................................... 420
18.4.18.1.3.1 Variation 1: Isomerization of Thiocarbonate O,O-Diesters .......... 421
18.4.19 Product Subclass 19: Thiocarbonate O,S-Diester S-Oxides and S,S-Dioxides 421
18.4.19.1 Synthesis of Product Subclass 19 ........................................... 421
18.4.20 Product Subclass 20: Carboxylic Thiocarbonic Anhydride S-Esters .......... 422
18.4.20.1 Synthesis of Product Subclass 20 ........................................... 422
18.4.20.1.1 Method 1: Addition of Acids to Chlorothioformate S-Esters .......... 422
18.4.20.1.2 Method 2: Addition of O-Metal Thiocarbonate S-Esters to Acid Chlorides 423
18.4.20.2 Applications of Product Subclass 20 in Organic Synthesis ................. 423
18.4.20.2.1 Method 1: Macrolactonization of Hydroxy Acids ....................... 423
18.4.21 Product Subclass 21: Carbamic Thiocarbonic Anhydride S-Esters .......... 424
18.4.21.1 Synthesis of Product Subclass 21 ........................................... 424
18.4.22 Product Subclass 22: O-Amino Thiocarbonate S-Esters ...................... 424
18.4.22.1 Synthesis of Product Subclass 22 ........................................... 424
18.4.23 Product Subclass 23: S-Acyl Thiocarbonate O-Esters ....................... 425
18.4.23.1 Synthesis of Product Subclass 23 ........................................... 425
18.4.24 Product Subclass 24: Bis(alkoxycarbonyl) Sulides .......................... 425
18.4.24.1 Synthesis of Product Subclass 24 ........................................... 425
18.4.25 Product Subclass 25: S-(Imidocarbonyl) Thiocarbonate O-Esters .......... 426
18.4.25.1 Synthesis of Product Subclass 25 ........................................... 426
18.4.26 Product Subclass 26: Alkoxycarbonyl Thio cyanates ........................ 426
18.4.26.1 Synthesis of Product Subclass 26 ........................................... 426
18.4.27 Product Subclass 27: S-Halo Thiocarbonate O-Esters ....................... 427
18.4.27.1 Synthesis of Product Subclass 27 ........................................... 427
18.4.27.1.1 Method 1: Addition of Alcohols to Thioformate Derivatives .......... 427
18.4.27.1.2 Method 2: Halogenation of S-Acyl Thiocarbonate O-Esters ........... 427
18.4.27.2 Applications of Product Subclass 27 in Organic Synthesis ................. 428
18.4.27.2.1 Method 1: Nucleophilic Displacement of Thiol Derivatives .......... 428
18.4.28 Product Subclass 28: S-Sulfanyl Derivatives of Thiocarbonate O-Esters ... 429
18.4.28.1 Synthesis of Product Subclass 28 ........................................... 429
18.4.28.1.1 Method 1: Disulfides and Trisulfides by Addition to S-Substituted Chlorothioformates .......... 429
18.4.28.1.2 Method 2: Addition of Sodium Thiosulfate to Chloroformates .......... 430
18.4.28.1.3 Method 3: Oxidation of Alkoxycarbonyl Alkyl Disulfides ............... 430
18.4.28.1.4 Method 4: Rearrangements ........................................... 431
18.4.29 Product Subclass 29: S-Amino Thiocarbonate O-Esters ..................... 432
18.4.29.1 Synthesis of Product Subclass 29 ........................................... 432
18.4.30 Product Subclass 30: Acyclic Dithiocarbonate S,S-Diesters ................. 432
18.4.30.1 Synthesis of Product Subclass 30 ........................................ 432
18.4.30.1.1 Method 1: Addition of Thiols to Chlorothioformate S-Esters .......... 432
18.4.30.1.2 Method 2: Activation of O-Metal Thiocarbonate S-Esters ............ 433
18.4.30.1.3 Method 3: Rearrangement of Dithiocarbonate O,S-Diesters .......... 433
18.4.30.1.3.1 Variation 1: Isomerization Using Acids .............................. 434
18.4.30.1.3.2 Variation 2: Isomerization Using Bases .............................. 434
18.4.30.1.3.3 Variation 3: [3,3]-Sigmaotropic Rearrangement ..................... 434
18.4.31 Product Subclass 31: Cyclic Dithiocarbonate S,S-Diesters .................. 435
18.4.31.1 Synthesis of Product Subclass 31 ......................................... 435
18.4.31.1.1 Method 1: Addition of Dithiols/Dithiones to the Carbonyl Group .... 435
18.4.31.1.2 Method 2: Oxidation of Cyclic Trithiocarbonates ....................... 436
18.4.31.1.2.1 Variation 1: Conversion of Thiones into Carbonyl Compounds Using
Oxiranes .................................................. 436
18.4.31.1.3 Method 3: Halocyclization of S-Allyl Dithiocarbonate O-Esters .... 436
18.4.31.1.4 Method 4: Acid-Catalyzed Cyclization of O-Alkyl S-(2-Oxoalkyl)
Dithiocarbonates ........................................... 437
18.4.31.1.5 Method 5: Cycloaddition of Dithiocarbonate O,S-Diesters with Alkynes 438
18.4.31.1.6 Method 6: Isomerization of Dithiocarbonate O,S-Diesters ............. 438
18.4.32 Product Subclass 32: Dithiocarbonate S,S-Diester S-Oxides .................. 438
18.4.32.1 Synthesis of Product Subclass 32 ......................................... 438
18.4.33 Product Subclass 33: S-Acyl Dithiocarbonate S-Esters ....................... 439
18.4.33.1 Synthesis of Product Subclass 33 ......................................... 439
18.4.34 Product Subclass 34: S,S-Bis[(dialkylamino)thiocarbonyl]
Dithiocarbonates ............................................... 439
18.4.34.1 Synthesis of Product Subclass 34 ......................................... 439
18.4.35 Product Subclass 35: (Alkylsulfanyl)carbonyl Thiocyanates ............... 440
18.4.35.1 Synthesis of Product Subclass 35 ......................................... 440
18.4.36 Product Subclass 36: S-Sulfanyl Derivatives of Dithiocarbonate S-Esters .. 440
18.4.36.1 Synthesis of Product Subclass 36 ......................................... 440
18.4.37 Product Subclass 37: Acyclic Selenocarbonate O,Se-Diesters ................ 441
18.4.37.1 Synthesis of Product Subclass 37 ......................................... 441
18.4.37.1.1 Method 1: Selenation of Tellurocarbonate O,Te-Diesters ............ 441
18.4.37.1.2 Method 2: Addition of Selenols to Chloroformates .................... 441
18.4.37.1.2.1 Variation 1: Reaction with (Arylselanyl)magnesium Bromides .... 442
18.4.37.1.2.2 Variation 2: Synthesis from Diselenides ............................. 442
18.4.37.1.2.3 Variation 3: Synthesis Using 1,1'-Carbonyldimidazole ................ 442
18.4.37.1.3 Method 3: Palladium-Catalyzed Coupling of Selenides with
Chloroformates ............................................ 443
18.4.37.2 Applications of Product Subclass 37 in Organic Synthesis ............. 443
18.4.37.2.1 Method 1: Formation of γ- and δ-Lactones ............................. 443
18.4.38  Product Subclass 38: Cyclic Selenocarbonate O,Se-Diesters  .......... 444
18.4.38.1 Synthesis of Product Subclass 38 ........................................ 444
18.4.39  Product Subclass 39: Bis(alkoxycarbonyl) Selenides ....................... 445
18.4.39.1 Synthesis of Product Subclass 39 ........................................ 445
18.4.40  Product Subclass 40: Cyclic Selenothiocarbonate S,Se-Diesters .......... 445
18.4.40.1 Synthesis of Product Subclass 40 ........................................ 445
18.4.41  Product Subclass 41: Acyclic Diselenocarbonate Se,Se-Diesters .......... 445
18.4.41.1 Synthesis of Product Subclass 41 ........................................ 445
18.4.42  Product Subclass 42: Cyclic Diselenocarbonate Se,Se-Diesters .......... 446
18.4.42.1 Synthesis of Product Subclass 42 ........................................ 446
18.4.43  Product Subclass 43: Acyclic Tellurocarbonate O,Te-Diesters .......... 446
18.4.43.1 Synthesis of Product Subclass 43 ........................................ 446
18.4.44  Product Subclass 44: Bis(alkoxycarbonyl) Tellurides ..................... 446
18.4.44.1 Synthesis of Product Subclass 44 ........................................ 446

18.5  Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides

18.5  Product Class 5: Polymeric Carbonic Acids and Esters, and Their Sulfur Analogues .......... 451
18.5.1  Product Subclass 1: Polycarbonates ......................................... 451
18.5.1.1 Synthesis of Product Subclass 1 ........................................... 452
18.5.1.1.1 Method 1: Diol Addition to Carbonic Acid Derivatives ............... 452
18.5.1.1.1.1 Variation 1: Condensation of Phosgene and Diphenols ............ 452
18.5.1.1.1.2 Variation 2: Condensation of Diols with Diaryl and Dialkyl Carbonates .... 453
18.5.1.1.1.3 Variation 3: Direct Condensation of Diols with Carbon Dioxide .... 453
18.5.1.1.1.4 Variation 4: Copolymerization of Epoxides with Carbon Dioxide .... 454
18.5.1.1.2 Method 2: Ring-Opening Polymerization ................................ 455
18.5.1.1.2.1 Variation 1: Ring-Opening Polymerization of Cyclic Carbonates 455
18.5.1.1.2.2 Variation 2: Ring-Opening Polymerization of Cyclic Spiroorthocarbonates 456
18.5.1.1.3 Method 3: Coupling of Diphenols with Carbon Monoxide .......... 456
18.5.1.2  Product Subclass 2: Polythiocarbonates .................................. 457
18.5.1.2.1 Synthesis of Product Subclass 2 ........................................ 457
18.5.1.2.1.1 Method 1: Condensation of Phosgene with Dithiols ............... 457
18.5.1.2.1.2 Method 2: Ring-Opening Polymerization ............................ 458

  18.6.2.2.4 Method 4: Reaction of Ureas from Carbamates ....................... 553
  18.6.2.2.4.1 Variation 1: Diiodosilane-Mediated Synthesis of Ureas from Carbamates 553
  18.6.3 Product Subclass 3: Cyclic Carbamates ............................... 554
  18.6.3.1 Synthesis of Product Subclass 3 .................................... 555
  18.6.3.1.1 Synthesis from Amino Alcohols .................................... 555
  18.6.3.1.1.1 Method 1: Reaction with Phosgene, Trichloromethyl Chloroformate, and Bis(trichloromethyl) Carbonate .......................... 555
  18.6.3.1.1.2 Method 2: Reaction with Organic Carbonates .................... 559
  18.6.3.1.1.2.1 Variation 1: Reaction with Alkylammonium Carbonates .......... 560
  18.6.3.1.1.2.2 Variation 2: Reaction with Organic Dicarbonates .............. 561
  18.6.3.1.1.2.3 Variation 3: Reaction with Polymer-Supported Carbonate .... 562
  18.6.3.1.1.3 Method 3: Reaction with Ureas .................................. 563
  18.6.3.1.1.4 Method 4: Reaction with Carbon Dioxide .......................... 563
  18.6.3.1.1.4.1 Variation 1: Electrochemical Reaction with Carbon Dioxide .... 564
  18.6.3.1.1.5 Method 5: Reaction with Carbon Monoxide .......................... 565
  18.6.3.1.1.6 Method 6: Reaction with Trihaloacetic Acid Derivatives .......... 566
  18.6.3.1.1.7 Method 7: Reaction with Isocyanates ............................ 567
18.6.3.1.8 Method 8: Reaction with 1,1'-Carbonyldiimidazole ............... 568
18.6.3.1.2 Synthesis from Cyclic Carbonates ........................................ 569
18.6.3.1.2.1 Method 1: Reaction with Isocyanates ............................. 569
18.6.3.1.2.2 Method 2: Reaction with Aromatic Amines ...................... 570
18.6.3.1.2.3 Method 3: Reaction with Formamide and with Ammonium Carbonate and Potassium Cyanide .......................... 571
18.6.3.1.3 Synthesis from Oxiranes .................................................. 571
18.6.3.1.3.1 Method 1: Reaction with Isocyanates ............................. 571
18.6.3.1.3.1.1 Variation 1: Reaction with 1,3,5-Triazinane-2,4,6-trione ................. 573
18.6.3.1.3.1.2 Variation 2: Reaction with Isothiocyanates ..................... 574
18.6.3.1.3.2 Method 2: Reaction with Carbamates ............................ 575
18.6.3.1.3.3 Method 3: Reaction of 2-(Aminomethyl)oxiranes with Carbon Dioxide ............................... 575
18.6.3.1.4 Synthesis from Carbamates ............................................... 576
18.6.3.1.4.1 Method 1: Cyclization of Carbamates ............................. 576
18.6.3.1.4.1.1 Variation 1: Pyrolytic Cyclization of Carbamates .............. 576
18.6.3.1.4.1.2 Variation 2: Cyclization of Hydroxycarbamates and Derivatives .......... 577
18.6.3.1.4.1.3 Variation 3: 4-Toluenesulfonyl Chloride Mediated Cyclization of N-tert-Butoxycarbonyl Derivatives of β-Amino Alcohols ........................... 578
18.6.3.1.4.1.4 Variation 4: Cyclization of N-Substituted β-Chloroethyl Carbamates ............................... 579
18.6.3.1.4.1.5 Variation 5: Cyclization via Silyl Carbamates .................. 580
18.6.3.1.4.1.6 Variation 6: Cyclization of Unsaturated Carbamates .......... 581
18.6.3.1.4.2 Method 2: Reaction with Alkenes ................................. 582
18.6.3.1.4.3 Method 3: Reaction with α-Halo Carbonyl Compounds ............ 582
18.6.3.1.5 Synthesis from Unsaturated Compounds ................................... 583
18.6.3.1.5.1 Method 1: Reaction of Terminal Alkynyl Alcohols with Isocyanates .......................... 583
18.6.3.1.5.2 Method 2: Reaction of Terminal Alkynyl Alcohols with Amines and Carbon Dioxide .............................. 584
18.6.3.1.5.3 Method 3: Reaction of Unsaturated Amines with Carbon Dioxide .......................... 585
18.6.3.1.5.3.1 Variation 1: Reaction of Allylamines and Homoallylamines with Carbon Dioxide .......................... 585
18.6.3.1.5.3.2 Variation 2: Reaction of Propargylamines with Carbon Dioxide ...................... 586
18.6.3.1.6 Synthesis from Aziridines .................................................. 587
18.6.3.1.6.1 Method 1: Reaction with Carbon Dioxide ............................. 587
18.6.3.1.6.2 Method 2: Reaction with Organic Dicarbonates .................. 588
18.6.3.1.7 Synthesis by Other Methods ............................................... 589
18.6.3.1.7.1 Method 1: One-Pot Synthesis of Oxazolidin-2-ones from Amino Acids .............. 589
18.6.3.1.7.2 Method 2: Hofmann-Type Rearrangement of Hydroxy Amides ............. 592
18.6.3.1.7.3 Method 3: Curtius Rearrangement of β-Hydroxy Acids ............... 593
18.6.3.1.7.4 Method 4: Reaction of β-Aminoalkylsulfuric Acids with Inorganic Carbonates ...................... 593
18.6.3.1.7.5 Method 5: Synthesis of 1,3-Oxazetidin-2-ones .................... 594
18.6.3.1.7.5.1 Variation 1: Reaction of Halo Ketones with Isocyanates ............... 594
18.6.3.1.7.5.2 Variation 2: Hydrolysis of Halo Isocyanates ..................... 595
18.6.10.1.1 Method 1: Reaction of Alkylcarbamoyl Chlorides with Alkylithium Compounds and Elemental Tellurium .......... 635
18.6.10.1.2 Method 2: Reduction of Bis(N,N-dimethylcarbamoyl) Ditellurides .......... 635
18.6.10.2 Applications of Product Subclass 10 in Organic Synthesis ............ 636
18.6.10.2.1 Method 1: Synthesis of Functionalized Amides .................. 636
18.6.11 Product Subclass 11: Phosphinecarboxylates .......................... 637
18.6.11.1 Synthesis of Product Subclass 11 ..................................... 637
18.6.11.1.1 Method 1: Reaction of Arylphosphines with Alkyl Chloroformates .......... 637
18.6.11.1.2 Method 2: Reaction of Alkali Metal Salts of Diphenylphosphines with Carbon Dioxide ...................................... 637

18.7 Product Class 7: Polymeric Carbamic Acids and Esters, and Their Sulfur Analogues
S. C. Moratti and Y. C. Charalambides

18.7.1 Product Subclass 1: Polycarbamates (Polyurethanes) .................. 650
18.7.1.1 Synthesis of Product Subclass 1 ....................................... 650
18.7.1.1.1 Method 1: Alcohol Addition to Isocyanates ......................... 650
18.7.1.1.2 Variation 1: From Alcohols and Nitrile Carbonates ................. 651
18.7.1.1.2 Variation 2: From Alcohols and 1,3-Bis(4-isocyanatoaryl)-1,3-diazetidine-2,4-diones ................................................. 652
18.7.1.1.3 Variation 3: From Latent Monomers .................................. 653
18.7.1.1.4 Variation 4: Through the Decomposition of Acyl Azides .............. 653
18.7.1.1.5 Variation 5: Polymerization of Isocyanato Alcohols .................. 654
18.7.1.1.6 Method 2: From Amines and Carbonate Derivatives .................. 655
18.7.1.1.6 Variation 1: By Addition of Amines to Chloroformates ............... 656
18.7.1.1.6 Variation 2: From Amines and Trichloroacetates ...................... 656
18.7.1.1.7 Method 3: From Alcohols and Carbamic Esters ....................... 657
18.7.1.1.8 Method 4: Condensation of Alkyl Halides with Cyanates and Diols .... 658
18.7.1.1.9 Method 5: From Aziridines and Carbon Dioxide ....................... 659
18.7.1.1.10 Method 6: From Iminocarbonates and Alcohols ...................... 659
18.7.1.1.11 Method 7: From Iminocarbonates and Acids .......................... 661
18.7.2 Product Subclass 2: Polythiocarbamates ................................. 661
18.7.2.1 Synthesis of Product Subclass 2 ........................................ 662
18.7.2.1.1 Method 1: Addition of Thiols to Isocyanates .......................... 662
18.7.2.1.2 Method 2: From Bis(chlorothioformates) and Diamines .................. 662
18.8 Product Class 8: Acyclic and Cyclic Ureas
G. Sartori and R. Maggi

18.8.1 Product Subclass 1: Unfunctionalized Ureas

18.8.1.1 Synthesis of Product Subclass 1

18.8.1.1.1 Method 1: From Phosgene

18.8.1.1.2 Method 2: From Ureas and Thioureas

18.8.1.1.2.1 Variation 1: From Cyclic Ureas by N-Alkylation

18.8.1.1.2.2 Variation 2: From N-(ω-Functionalized) Ureas

18.8.1.1.2.3 Variation 3: Transamination of Ureas

18.8.1.1.2.4 Variation 4: By Reaction with Bifunctional Compounds

18.8.1.1.2.5 Variation 5: Reductive N-Alkylation of Ureas

18.8.1.1.2.6 Variation 6: By Three-Component Reaction with Aldehydes and
β-Dicarbonyl Compounds (Biginelli Reaction)

18.8.1.1.2.7 Variation 7: Transformation of Thioureas

18.8.1.1.3 Method 3: From Isoureas by Isomerization

18.8.1.1.4 Method 4: From Isocyanates

18.8.1.1.4.1 Variation 1: By Reaction with Amines or Imines

18.8.1.1.4.2 Variation 2: By Reaction with Azirines and Aziridines

18.8.1.1.4.3 Variations 3: Miscellaneous Reactions

18.8.1.1.5 Method 5: From Carbon Dioxide

18.8.1.1.6 Method 6: From Carbon Monoxide

18.8.1.1.7 Method 7: From Alkyl Carbonates and Dithiocarbonates

18.8.1.1.7.1 Variation 1: Reaction of Amines with Dimethyl Carbonate,
Diethyl Carbonate, and Bis(4-nitrophenyl) Carbonate

18.8.1.1.7.2 Variation 2: Reaction of Amines with Di-tert-butyl Dicarbonate

18.8.1.1.7.3 Variation 3: Reaction of Amines with Bis(trichloromethyl) Carbonate
(Triphosgene)

18.8.1.1.7.4 Variation 4: Reaction of Amines with Dithiocarbonates

18.8.1.1.8 Method 8: From Carbamates or Thiocarbamates

18.8.1.1.8.1 Variation 1: By Reaction with Amines

18.8.1.1.8.2 Variation 2: By Reaction with Imines

18.8.1.1.8.3 Variations 3: Miscellaneous Reactions

18.8.1.1.9 Method 9: From o-Aminoarenecarboxylic Acid Derivatives

18.8.1.1.10 Methods 10: Miscellaneous Reactions

18.8.2 Product Subclass 2: N-Haloureas

18.8.2.1 Synthesis of Product Subclass 2

18.8.3 Product Subclass 3: N-Hydroxyureas

18.8.3.1 Synthesis of Product Subclass 3

18.8.3.1.1 Method 1: By Reaction of Phenyl (Phenoxy carbonyloxycarbamates with
Ammonia

18.8.3.1.2 Method 2: From Isocyanates and Hydroxylamine Derivatives

18.10.6.1.5 Method 5: Photochemical and Radical-Initiated Addition of Dithiocarbonates O,S-Esters to Terminal Alkenes

18.10.6.2 Applications of Product Subclass 6 in Organic Synthesis

18.10.7 Product Subclass 7: Thioisocyanates

18.10.7.1 Synthesis of Product Subclass 7

18.10.7.1.1 Method 1: From Carbon Disulfide and Hydrogen Sulfide or Thiols with Alkyl Halides

18.10.7.1.1.1 Variation 1: Cyclization of Oxiranes, Thiiranes, and Acetylenic Compounds with Carbon Disulfide

18.10.7.1.2 Variation 2: Poly-1,3-dithiole-2-thione

18.10.7.1.3 Method 2: From Salts of Thioisocyanic Acid and Monoesters of Thioisocyanic Acid

18.10.7.1.4 Method 3: From Thiophosgene or 1,1'-Thiocarbonyl diimidazole

18.10.7.1.5 Methods 5: Miscellaneous Methods

18.10.7.2 Applications of Product Subclass 7 in Organic Synthesis

18.10.7.2.1 Method 1: From 2-Thioxo-1,3-dithiole-4,5-dithiolate and Its Zinc Complex

18.10.8 Product Subclass 8: Thioureas

18.10.8.1 Synthesis of Product Subclass 8

18.10.8.1.1 Method 1: From Urea

18.10.8.1.2 Method 2: From Thiophosgene or Carbon Disulfide

18.10.8.1.3 Method 3: From Isothiocyanates

18.10.8.1.4 Method 4: From Chlorodithioformates

18.10.8.1.5 Method 5: From Carbodiimides

18.10.8.1.6 Method 6: From Thiocarbonyl Transfer Reagents

18.10.8.1.7 Methods 7: Miscellaneous Methods

18.10.9 Product Subclass 9: Thiosemicarbazides

18.10.9.1 Synthesis of Product Subclass 9

18.10.9.1.1 Method 1: Using Isothiocyanates and Hydrazine Derivatives

18.10.9.1.1.1 Variation 1: [3 + 2]-Cycloaddition Reactions

18.10.9.1.1.2 Variation 2: Intramolecular Cyclization Reactions

18.10.9.1.2 Method 2: From Compounds Containing the Thiocarbamoyl Moiety

18.10.9.1.3 Methods 3: Miscellaneous Methods

18.10.9.2 Applications of Product Subclass 9 in Organic Synthesis

18.10.9.2.1 Method 1: Cyclization of 1-Acylthiosemicarbazides

18.10.10 Product Subclass 10: Thiocarbonohydrazides

18.10.10.1 Synthesis of Product Subclass 10

18.10.10.1.1 Method 1: From Carbon Disulfide

18.10.10.1.2 Method 2: From Thiophosgene
18.10.11  **Product Subclass 11: Thiocarbamate O-Esters** ........................................ 923

18.10.11.1 Synthesis of Product Subclass 11 ...................................................... 923

18.10.11.1.1 Method 1: From Isothiocyanates .................................................. 923

18.10.11.1.2 Method 2: From Chlorothioformate O-Esters ................................... 926

18.10.11.1.3 Method 3: From N,N-Disubstituted Thiocarbamoyl Chlorides ............ 928

18.10.11.1.4 Method 4: From 1,1’-Thiocarbonyldiimidazole and Related Compounds 931

18.10.11.1.5 Method 5: From Amino Alcohols and Carbon Disulfide and Related Methods ................................. 932

18.10.12  **Product Subclass 12: Dithiocarbamic Acid Esters** .................................. 933

18.10.12.1 Synthesis of Product Subclass 12 ...................................................... 934

18.10.12.1.1 Method 1: From Sodium Dithiocarbamates ................................. 934

18.10.12.1.2 Method 2: From Carbon Disulfide .............................................. 937

18.10.12.1.3 Method 3: From Isothiocyanates ................................................. 942

18.10.12.1.4 Method 4: From Thiocarbamoyl Chlorides .................................... 945

18.10.12.1.5 Method 5: From Thiuram Disulfides ........................................... 946

18.10.13  **Product Subclass 13: Thiocarbamoyl Chlorides** .................................... 949

18.10.13.1 Synthesis of Product Subclass 13 ...................................................... 949

18.10.13.1.1 Method 1: From Thiophosgene and Primary or Secondary Amines ...... 949

18.10.13.1.2 Method 2: From Thiuram Disulfides ........................................... 950

18.10.13.1.3 Method 3: From Thioformamides .................................................. 951

18.10.14  **Product Subclass 14: Phosphinecarbothioamides** .................................. 952

18.10.14.1 Synthesis of Product Subclass 14 ...................................................... 952

18.10.14.1.1 Method 1: From Isothiocyanates .................................................. 952

18.10.14.1.2 Method 2: From Halothioamides .................................................. 953

18.10.14.1.3 Method 3: Thiophosphorylidithioformate .................................... 954

18.10.14.1.4 Methods 4: Miscellaneous Methods ............................................. 955

18.11  **Product Class 11: Seleno- and Tellurocarbonic Acids and Derivatives**

J. Schmidt and L. A. Silks

18.11  **Product Class 11: Seleno- and Tellurocarbonic Acids and Derivatives** .......... 969

18.11.1  **Product Subclass 1: Selenocarbonyl Dihalides** .................................... 971

18.11.1.1 Synthesis of Product Subclass 1 ...................................................... 971

18.11.1.1.1 Method 1: Selenocarbonyl Difluoride from Bis(trifluoromethyl)mercury(II) .................. 971

18.11.1.1.2 Method 2: Selenocarbonyl Difluoride from Trimethyl[(trifluoromethyl)selenyl]stannane ................. 972

18.11.1.1.3 Method 3: Selenocarbonyl Difluoride by Controlled Decomposition of Tris[(trifluoromethyl)selenyl]borane ...................................................... 972

18.11.1.1.4 Method 4: Selenocarbonyl Dichloride by Vacuum Pyrolysis of 2,2,4,4-Tetrachloro-1,3-diselenetane ......................... 973
18.11.2  **Product Subclass 2: Selenocarbonates** ........................................... 973

18.11.2.1  Synthesis of Product Subclass 2 .................................................. 973

18.11.2.1.1  Method 1: From Viehe's Salt and Sodium Hydrogen Selenide ........... 973

18.11.2.1.2  Method 2: Selenocarbonyls from the Reaction of Acetal Derivatives with Bis(dimethylaluminum) Selenide .................................................. 974

18.11.2.1.3  Method 3: Selenocarbonates from Carbon Diselenide .................. 975

18.11.2.1.4  Method 4: Selenocarbonates from Substitution Reactions with Sodium Hydrogen Selenide and Hydrogen Selenide ......................... 975

18.11.3  **Product Subclass 3: Selenocarbamates** ......................................... 976

18.11.3.1  Synthesis of Product Subclass 3 ................................................. 977

18.11.3.1.1  Method 1: Synthesis of Cyclic Selenocarbamates from Metalation Reactions .................................................. 977

18.11.3.1.2  Method 2: From Addition Reactions to Isoselenocyanates .............. 979

18.11.3.1.3  Method 3: By Addition of Alkoxides to Isoselenocyanates .......... 979

18.11.3.1.4  Method 4: Substitution Reactions with Sodium Hydrogen Selenide or Hydrogen Selenide .................................................. 980

18.11.3.1.5  Method 5: Addition of Carbon Diselenide to 1,2-Amino Alcohols .... 981

18.11.3.1.6  Method 6: From Lithium Aluminum Hydride Hydroselenide and Viehe’s Salt .................................................. 982

18.11.3.1.7  Method 7: Te-Alkyl Selenotellurocarbamates from Organoselenocyanates .................................................. 983

18.11.3.2  Applications of Product Subclass 3 in Organic Synthesis .................. 984

18.11.3.2.1  Method 1: As an Analytical Tool for the Discrimination of Remotely Disposed Chiral Centers .................................................. 984

18.11.3.2.2  Method 2: Stereoselective C—C Bond Formation via Chiral Selone Promoted Aldol Reactions .................................................. 986

18.11.4  **Product Subclass 4: Selenosemicarbazides and Selenosemicarbazones** • 986

18.11.4.1  Synthesis of Product Subclass 4 .................................................. 986

18.11.4.1.1  Method 1: Synthesis from Isoselenocyanates and Hydrazine .......... 986

18.11.5  **Product Subclass 5: Selenoureas** .................................................. 987

18.11.5.1  Synthesis of Product Subclass 5 .................................................. 988

18.11.5.1.1  Method 1: From Metalation Reactions ........................................... 988

18.11.5.1.2  Method 2: From Carbon Diselenide ........................................... 989

18.11.5.1.3  Method 3: From Substitution Reactions with Sodium Hydrogen Selenide or Hydrogen Selenide .................................................. 990

18.11.5.1.4  Method 4: From Addition Reactions to Isoselenocyanates .......... 991

18.11.5.1.5  Method 5: From Carbene Reactions with Selenium .................... 991

18.11.5.1.6  Method 6: From Addition of Potassium Selenocyanate to Primary Ammonium Salts or Amines .................................................. 992

18.11.5.1.7  Method 7: From Cyanamide and Phosphorus Pentaselenide .......... 993

18.11.5.1.8  Method 8: From the Woollins Reagent ........................................... 993
Product Subclass 6: Phosphorus-Substituted Selenocarbonyl Derivatives

Synthesis of Product Subclass 6

Method 1: From Addition Reactions to Carbon Diselenide

Product Subclass 7: Tellurocarbonyl Dihalides

Synthesis of Product Subclass 7

Method 1: Tellurocarbonyl Dihalides from Trimethyl[(trifluoromethyl)tellanyl]stannane

Product Subclass 8: Telluroreas

Synthesis of Product Subclass 8

Method 1: Tellurocarbonyl Dihalides from Trimethyl[(trifluoromethyl)tellanyl]stannane

Product Subclass 9: Ditellurocarbonic and Ditellurocarbamic Acids and Their Metal Complexes

Synthesis of Product Subclass 9

Method 1: By the Uchida Method

Product Class 12: Imidic Acids and Derivatives, Isoureas and Derivatives, Sulfur and Selenium Equivalents, and Analogously Substituted Methyleneophosphines

Synthesis of Product Subclass 1

Method 1: From Glyoxylic Acid Derivatives and Halogens

Method 2: By Halogenation of Formanilides and Isocyanates

Method 3: By Halogenation of Isothiocyanates and Related Compounds

Variation 1: By Halogenation of Isothiocyanates

Variation 2: From Dithiocarbamates and Carbonimidodithioates

Variation 3: Dihaloiminium Salts from Dithiocarbamates and Dithiurams

Method 4: By Chlorination of N-Methylamides

Method 5: By Reactions Involving Dichlorocarbene

Method 6: From Tetrahalomethanes and Aromatic Amines

Method 7: From Trihalomethylamines by Elimination

Method 8: By Addition of Halogens to Isocyanides

Method 9: By Addition to Cyanogen Chloride

Method 10: From Other Carbonimidic Dihalides by Exchange of a Halogen Atom Bonded to Carbon

Method 11: From Other Carbonimidic Dihalides by Exchange or Modification of the Nitrogen Substituent
18.12.2 Applications of Product Subclass 1 in Organic Synthesis ........................ 1013

18.12.2 Product Subclass 2: Carbonohalidimidic Acid Derivatives .......................... 1014
18.12.2.1 Synthesis of Product Subclass 2 .................................................... 1014
18.12.2.1.1 Method 1: From Carbonimidic Dihalides and Oxygen Nucleophiles ........ 1014
18.12.2.1.2 Method 2: By Chlorination of Carbamates ................................... 1015
18.12.2.1.3 Method 3: By Addition to Aryl Cyanates .................................... 1015

18.12.3 Product Subclass 3: Carbonohalidimidothioates ........................................ 1016
18.12.3.1 Synthesis of Product Subclass 3 .................................................... 1016
18.12.3.1.1 Method 1: From Carbonimidic Dichlorides and Sulfur Nucleophiles .... 1016
18.12.3.1.2 Method 2: By Chlorination of Isothiocyanates and Related Compounds 1017
18.12.3.1.2.1 Variation 1: By the Addition of Chlorine to Isothiocyanates .......... 1017
18.12.3.1.2.2 Variation 2: By Chlorination of Thiocarbamates and Dithiocarbamates 1018
18.12.3.1.2.3 Variation 3: From Carbonimidodithioates ................................ 1018
18.12.3.1.3 Method 3: By Addition of Sulfenyl Chlorides to Isocyanides ............ 1019
18.12.3.1.4 Method 4: By Electrophilic Additions to Nitriles ............................ 1019
18.12.3.1.4.1 Variation 1: From Thiocyanates and Electrophiles ................... 1019
18.12.3.1.4.2 Variation 2: From Sulfonyl Cyanides and Electrophiles ............. 1020
18.12.3.2 Applications of Product Subclass 3 in Organic Synthesis ........................ 1020

18.12.4 Product Subclass 4: Carbamimidic Halides .............................................. 1021
18.12.4.1 Synthesis of Product Subclass 4 .................................................... 1021
18.12.4.1.1 Method 1: From Carbonimidic Dihalides and Amines ................... 1021
18.12.4.1.2 Method 2: From Dichloroiminium Salts and Nitrogen Nucleophiles ... 1022
18.12.4.1.3 Method 3: By Chlorination of Ureas and Thioureas .......................... 1023
18.12.4.1.4 Method 4: By Addition of Acid Chlorides to Carbodiimides .......... 1023
18.12.4.1.4.1 Variation 1: From Thiocyanates and Electrophiles ................... 1023
18.12.4.1.5 Method 5: By Electrophilic Addition to Cyanamides .................... 1024
18.12.4.1.6 Method 6: From Isocyanides and 1-Chlorobenzotriazole ............... 1025

18.12.5 Product Subclass 5: Carbonimidic Halides Bearing a Phosphorus Substituent .......... 1025
18.12.5.1 Synthesis of Product Subclass 5 .................................................... 1025
18.12.5.1.1 Method 1: From (Dialkoxyphosphoryl)-α-haloacetaldehydes or from [Bis(dialkylamino)phosphoryl]-α-haloacetaldehydes by Diazocoupling or Nitrosation 1025
18.12.5.1.1.1 Variation 1: Arylhydrazones by Diazocoupling ........................... 1026
18.12.5.1.1.2 Variation 2: Oximes by Nitrosation ........................................ 1026
18.12.5.1.2 Method 2: From Dihalo(dichlorophosphoryl)methyl Isocyanates and Alcohols 1027

18.12.6 Product Subclass 6: Carbonimidic Diesters ............................................ 1028
18.12.6.1 Synthesis of Product Subclass 6 .................................................... 1028
18.12.6.1.1 Method 1: From Carbonimidic Dihalides and Oxygen Nucleophiles ........ 1028
18.12.6.1.2 Method 2: From Tetraethyl Orthocarbonate and Related Compounds with Amino Compounds ................................. 1029
18.12.6.1.3 Method 3: By the O-Alkylation of Carbamates ................................ 1029
18.12.6.1.4 Method 4: By the Addition of Alcohols to Cyanogen Halides and Cyanates ................................................. 1030
18.12.6.1.5 Method 5: From Other Carbonimidate Esters by Substitution on Nitrogen ................................................ 1031
18.12.7 **Product Subclass 7: Carbonimidothioate Diesters** .................................................................................. 1031
18.12.7.1 Synthesis of Product Subclass 7 .................................................................................................................. 1032
18.12.7.1.1 Method 1: From Carbonimidic Halides by Displacement of Halide Ion .......................................................... 1032
18.12.7.1.2 Method 2: By Nucleophilic Additions to Cyanates or Thiocyanates .............................................................. 1032
18.12.7.1.3 Method 3: By the S-Alkylation of O-Alkyl Thiocarbamates and Related Compounds .................................. 1033
18.12.7.1.3.1 Variation 1: By the S-Alkylation of O-Alkyl Thiocarbamates ................................................................. 1033
18.12.7.1.3.2 Variation 2: From Isothiocyanates, Alcohols, and Alkylating Agents ...................................................... 1034
18.12.7.1.4 Method 4: From Other Carbonimidothioates by Substitution on Nitrogen .................................................. 1035
18.12.8 **Product Subclass 8: Carbonimidoselenoic Diesters** .............................................................................. 1036
18.12.8.1 Synthesis of Product Subclass 8 .................................................................................................................. 1036
18.12.9 **Product Subclass 9: Carbamimidic Esters (Isoureas)** ............................................................................... 1037
18.12.9.1 Synthesis of Product Subclass 9 .................................................................................................................. 1037
18.12.9.1.1 Method 1: From Carbamimidic Chlorides and Oxygen Nucleophiles .......................................................... 1037
18.12.9.1.2 Method 2: From Carbonimidic Diesters and Amines .................................................................................. 1038
18.12.9.1.3 Method 3: By Addition of Alcohols to Carbodiimides .............................................................................. 1039
18.12.9.1.4 Method 4: By Addition of Alcohols to Cyanamides .................................................................................... 1039
18.12.9.1.5 Method 5: By Addition of Amines to Cyanates ........................................................................................... 1040
18.12.9.1.6 Method 6: By the O-Alkylation of Ureas .................................................................................................. 1040
18.12.9.1.7 Method 7: From Other Isoureas by Substitution on Nitrogen ................................................................. 1041
18.12.9.2 Applications of Product Subclass 9 in Organic Synthesis ......................................................................... 1041
18.12.10 **Product Subclass 10: Imides with an Oxygen and a Phosphorus Substituent** .................................................. 1041
18.12.10.1 Synthesis of Product Subclass 10 ............................................................................................................. 1041
18.12.10.1.1 Method 1: By the Displacement of Halides from Imidoyl Halides by Oxygen Nucleophiles ....................... 1041
18.12.10.1.2 Method 2: From (Trimethylsiloxy)phosphorus(III) Compounds and Isocyanates ........................................... 1042
18.12.11 **Product Subclass 11: Carbonimidodithioic Diesters** ........................................................................ 1042
18.12.11.1 Synthesis of Product Subclass 11 ............................................................................................................ 1042
18.12.11.1.1 Method 1: From Carbonimidic Halides and Sulfur Nucleophiles ............................................................. 1043
18.12.11.1.2 Method 2: By Addition of Thiols to Thiocyanates ..................................................................................... 1044
18.12.11.1.3 Method 3: By the Alkylation of Dithiocarbamates ................................................................................... 1044
18.12.11.1.4 Method 4: From Other Carbonimidodithioates by Substitution on Nitrogen ........................................ 1046
18.12.11.1.5 Method 5: Λ6-Sulfur Derivatives by S-Oxidation ......................................................................................... 1046
### 18.12.12 Product Subclass 12: Carbonimidodiselenoic Diesters  ........................................ 1047

18.12.12.1 Synthesis of Product Subclass 12  .................................................. 1047

18.12.12.1.1 Method 1: 1,3-Thiaselenol-2-imines from 1,3-Thiaselenole-2-thiones and Azides  ................. 1047

18.12.12.1.2 Method 2: From Alkynethiolates or Alkyneselenolates ........................................ 1047

### 18.12.13 Product Subclass 13: Carbamimidothioic Esters (Isothioureas)  .................. 1048

18.12.13.1 Synthesis of Product Subclass 13  .................................................. 1048

18.12.13.1.1 Method 1: From Carbonimidic Halides by Nucleophilic Displacement of Halide Ion .......................................................... 1048

18.12.13.1.2 Method 2: From Carbonimidodithioate Diesters and Nitrogen Nucleophiles ........................................ 1049

18.12.13.1.3 Method 3: By Addition of Thiols to Carbodiimides ........................................ 1050

18.12.13.1.4 Method 4: By the S-Alkylation of Thioureas ........................................ 1051

18.12.13.1.5 Method 5: By the Cycloaddition of Arenesulfonyle Isocyanates to Dithiocarbamates ........................................ 1052

18.12.13.1.6 Method 6: From Other Isothioureas by N-Acylation ........................................ 1052

### 18.12.14 Product Subclass 14: Imides with a Sulfur and a Phosphorus Substituent  .... 1053

18.12.14.1 Synthesis of Product Subclass 14  .................................................. 1053

18.12.14.1.1 Method 1: From Carbonimidic Halides by Nucleophilic Displacement of a Halide Ion ................. 1053

18.12.14.1.2 Method 2: By Addition of Phosphorus Nucleophiles to Isothiocyanates and Related Procedures ........................................ 1054

### 18.12.15 Product Subclass 15: Carbonimidodiselenoic Diesters  ........................................ 1055

18.12.15.1 Synthesis of Product Subclass 15  .................................................. 1055

### 18.12.16 Product Subclass 16: Carbamimidothioic Esters (Isothioureas)  .................. 1056

18.12.16.1 Synthesis of Product Subclass 16  .................................................. 1056

18.12.16.1.1 Method 1: Se-Alkylation of Selenoureas ........................................ 1056

### 18.12.17 Product Subclass 17: (Dihalomethylene)phosphines (Dihalophosphaalkenes) ........................................ 1057

18.12.17.1 Synthesis of Product Subclass 17  .................................................. 1058

18.12.17.1.1 Method 1: From Di- and Trihalomethylphosphines by Elimination ........................................ 1058

18.12.17.1.2 Variation 1: From Dichlorophosphines and Trihalomethanes ........................................ 1059

18.12.17.1.3 Variation 2: From Dichlorophosphines and Tetrahalomethanes ........................................ 1060

18.12.17.1.4 Variation 3: From Monosubstituted Phosphines and Tetrachloromethane ........................................ 1060

18.12.17.1.5 Method 2: From Diaryldiphosphenes and Tetrahalomethanes ........................................ 1061

18.12.17.2 Applications of Product Subclass 17 in Organic Synthesis ............................. 1061

### 18.12.18 Product Subclass 18: [Alkoxy(halo)methylene]phosphines [Alkoxy(halo)phosphaalkenes] ........................................ 1061

18.12.18.1 Synthesis of Product Subclass 18  .................................................. 1061

18.12.19.1 Synthesis of Product Subclass 19  .................................................. 1062
Product Subclass 20: [Dialkylamino(halo)methylene]phosphines
[Dialkylamino(halo)phosphaalkenes] ......................................... 1062

18.12.20.1 Synthesis of Product Subclass 20 .................................................. 1063

Product Subclass 21: (Halomethylene)phosphines
[(Halo)phosphaalkenes] Bearing a Phosphorus Substituent .................. 1063

18.12.21.1 Synthesis of Product Subclass 21 .................................................. 1063

Product Subclass 22: Dioxymethylenephosphines
(Dialkoxyphosphaalkenes) .......................................................... 1064

18.12.22.1 Synthesis of Product Subclass 22 .................................................. 1064

Product Subclass 23: [(Amino)(oxy)methylene]phosphines
[Alkoxy(amino)phosphaalkenes] .................................................... 1065

18.12.23.1 Synthesis of Product Subclass 23 .................................................. 1065

Product Subclass 24: Methylene phosphines (Phosphaalkenes) with
an Oxygen and a Phosphorus Substituent ........................................ 1065

18.12.24.1 Synthesis of Product Subclass 24 .................................................. 1065

Product Subclass 25: Disulfanylmethylenephosphines
(Disulfanylphosphaalkenes) .......................................................... 1066

18.12.25.1 Synthesis of Product Subclass 25 .................................................. 1066

Product Class 13: Guanidine Derivatives
R. G. S. Berlinck, M. H. Kossuga, and A. M. Nascimento

18.13 Product Class 13: Guanidine Derivatives ........................................ 1077

18.13.1 Product Subclass 1: Substituted Guanidines ..................................... 1077

18.13.1.1 Synthesis of Product Subclass 1 .................................................. 1078

18.13.1.1.1 Method 1: Reaction of Amines with Cyanamides ......................... 1078

18.13.1.1.1.1 Variation 1: Reaction of Amines with Cyanogen Bromide .............. 1078

18.13.1.1.1.2 Variation 2: Reaction of Amines with Carbodiimides .................. 1080

18.13.1.1.2 Method 2: Reaction of Amines with Substituted Thioureas .............. 1083

18.13.1.1.2.1 Variation 1: Reaction of Amines with Acylthioureas ................... 1087

18.13.1.1.2.2 Variation 2: Solid-Phase Reaction of Amines with Thioureas ........ 1089

18.13.1.1.3 Method 3: Reaction of Amines with 2-Chloro-4,5-dihydro-1H-imidazol-3-ium Chlorides .................................................. 1092

18.13.1.1.4 Method 4: Reaction of Amines with Chloroformimidamides ............ 1093

18.13.1.1.5 Method 5: Reaction of Primary Amines with O-Methylisoureas .......... 1094

18.13.1.1.6 Method 6: Reaction of Amines with 2-Methylisothioureas ............... 1095

18.13.1.1.6.1 Variation 1: Solid-Phase Synthesis of Amines with Methylisothioureas .. 1097

18.13.1.1.7 Method 7: Reaction of Primary Amines with Alkylamino(imino)-methanesulfonic Acids .................................................. 1099

18.13.1.1.8 Method 8: Reaction of Primary Amines with (Trifluoromethylsulfonyl)guanidines .................................................. 1100
Method 9: Reaction of Primary Amines with $1H$-Pyrazole-1-carboximidamides ........................................ 1101

Variation 1: Reaction of Amines with Di-$1H$-benzotriazol-1-ylmethanimines and with Di-$1H$-imidazol-1-ylmethanimine ......................... 1104

Method 10: Reaction of Guanidines with Alkyl and Aryl Halides .......... 1105

Method 11: Reaction of Guanidines with Alcohols or Activated Alcohols 1106

Method 12: Addition of Guanidine to Aldehydes, Ketones, and Esters 1107
To Give Cyclic Guanidinium Salts ........................................... 1107

Method 13: Addition of 2-Methylisoureas to Aldehydes and Ketones 1109

Method 14: Addition of Guanidine to $\alpha,\beta$-Unsaturated Aldehydes, Ketones, and Esters ........................................... 1110

Product Class 14: Phosphorus Analogues of Guanidine

T. L. Gilchrist

Product Subclass 1: Imines with One Nitrogen and One Phosphorus Substituent ........................................... 1117

Synthesis of Product Subclass 1 ........................................... 1117

Method 1: Substitution of Hydrogen on Imines .............................. 1117

Method 2: Displacement of a Halogen from Phosphorus-Substituted Imidoyl Halides by Nitrogen ........................................... 1118

Method 3: Displacement of Chlorine from a Chloroformamidinium Salt by Phosphorus ........................................... 1119

Method 4: Addition of Phosphorus Compounds to Carbodiimides .......... 1120

Variation 1: Addition of Phosphines ................................... 1120

Variation 2: Addition of Phosphites and Related Compounds ........... 1121

Method 5: Addition to Isocyanates .................................. 1121

Product Subclass 2: Imines with Two Phosphorus Substituents .......... 1122

Synthesis of Product Subclass 2 .......................................... 1122

Method 1: Displacement of Chlorine from Carbonimidic Dichlorides by Phosphorus ........................................... 1122

Product Subclass 3: Alkylidene phosphines with Two Nitrogen Substituents ........................................... 1123

Synthesis of Product Subclass 3 .......................................... 1123

Method 1: Elimination of Cyanide from Dicyanophosphines ........... 1124

Method 2: Addition of Phosphines to Bis(dialkylamino)difluoromethanes ........................................... 1124

Method 3: Addition of Phosphines to Tetramethylisouronium and Tetramethylisothiouronium Salts ........................................... 1124

Method 4: Addition of Phosphines to Bis(dialkylamino)carbenes .......... 1125

Method 5: Exchange of Substituents on Phosphorus .......................... 1126

18.15.2.2 Method 2: Fluorination by Trifluoromethyl Hypofluorite and Hypochlorite

18.15.3 Product Subclass 3: Compounds with Carbon—Halogen and Carbon—Sulfur Bonds

18.15.3.1 Synthesis of Product Subclass 3

18.15.3.1.1 Method 1: Trifluoromethanethiol from Bis(trifluoromethylsulfanyl)-mercury(II) and Hydrogen Chloride or Bis(trifluoromethyl) Disulfide and Hydrogen Sulfide

18.15.3.1.2 Method 2: Trifluoromethyl Sulfides from the Corresponding Trichloromethyl Sulfides and Antimony(III) Fluoride

18.15.3.1.3 Method 3: Trichloromethyl Sulfides by Chlorination of the Corresponding Methyl Sulfides

18.15.3.1.4 Method 4: Phenyl Trihalomethyl Sulfides by Trihalomethylation of Benzenethiols or Benzenethiolates

18.15.3.1.5 Method 5: Aryl or Methyl Trifluoromethyl Sulfides by Cross-Coupling Reactions between Iodoarenes or Iodomethane and (Trifluoromethylsulfanyl)metal Reagents

18.15.3.1.6 Method 6: Bis-, Tris-, and Tetrakis(trifluoromethylsulfanyl)methanes and Halotris(trifluoromethylsulfanyl)methanes

18.15.3.1.7 Method 7: Trifluoro- and Trichloromethanesulfenyl Halides

18.15.3.1.8 Method 8: Mono- and Bis(trifluoromethylsulfanyl)amines from Trifluoromethanesulfenyl Chloride and Ammonia

18.15.3.1.9 Method 9: Bis(trifluoromethyl) Sulfide, Disulfide, and Trisulfide

18.15.3.1.10 Method 10: (Trifluoromethyl)sulfur Trifluoride, Bis(trifluoromethyl)sulfur Difluoride, and Difluorobis(trifluoro-\(\lambda^4\)-sulfanyl)methane

18.15.3.1.11 Method 11: Trifluoromethanesulfinyl Fluoride and Chloride and Difluoromethanedisulfenyl Fluoride

18.15.3.1.12 Method 12: Trifluoromethyl Sulfoxides

18.15.3.1.13 Method 13: (Trifluoromethyl)sulfur Pentfluoride and (Trifluoromethyl)sulfur Chloride Tetrafluoride

18.15.3.1.14 Method 14: Trifluoromethanesulfonic Acid, Metal Trifluoromethanesulfinates, and Difluoromethanedisulfinic Acid

18.15.3.1.15 Method 15: Trifluoromethanesulfonyl Fluoride from Alkanesulfonic Acid Halides or Esters

18.15.3.1.16 Method 16: Difluorohalomethanesulfonyl Fluorides by Photolytic Decarbonylation of the Corresponding Difluoro(halocarbonyl)methanesulfonyl Fluorides

18.15.3.1.17 Method 17: Dihalomethanedisulfonfyl Difluorides by Halogenation of Methanedisulfonfyl Difluoride

18.15.3.1.18 Method 18: Halomethanethiosulfonfyl Trifluorides from Methanethiosulfonfyl Trifluoride

18.15.3.1.19 Method 19: Trifluoromethanesulfonyl Chloride

18.15.3.1.20 Method 20: Trichloromethanesulfonyl Chloride by Oxidation of Trichloromethanesulfenyl Chloride

18.15.3.1.21 Method 21: Trifluoromethyl Trifluoromethanethiosulfonate from Trifluoromethanesulfonic Anhydride
Method 22: Methyl Trifluoromethanesulfonate from Trifluoromethanesulfonic Acid and Dimethyl Sulfate  

Method 23: Phenyl Trifluoromethanesulfonate from Trifluoromethanesulfonic Acid and Trifluoromethanesulfonyl Fluoride  

Method 24: Trifluoromethanesulfonic Acid  

Method 25: Chlorodifluoromethanesulfonic Acid and Trichloromethanesulfonic Acid  

Method 26: Trifluoromethanesulfonic Anhydride from Trifluoromethanesulfonic Acid and Phosphorus Pentoxide  

Method 27: Trifluoromethyl Sulfones  

Method 28: Esters of Trifluoromethanethiosulfonic Acid or Trifluoromethaneselenosulfonic Acid from Metal Trifluoromethanesulfinates and Sulfenyl or Selenenyl Chlorides  

Method 29: Difluorohalomethanesulfonamides and Difluorohalomethanesulfonamides  

Applications of Product Subclass 3 in Organic Synthesis  

Method 1: Addition of Trifluoromethanethiol or Trifluoromethanesulfonyl Fluoride or Chloride to Alkenes and Alkynes  

Method 2: Applications of Trifluoromethanesulfonic Acid  

Method 3: Applications of Alkyl Trifluoromethanesulfonates and Trifluoromethanesulfonic Anhydride  

Method 4: An N-(Trifluoromethylsulfonyl)sulfimide from N,N-Dichlorotrifluoromethanesulfonamide and (Trifluoromethylsulfanyl)-benzene  

Product Subclass 4: Compounds with Carbon—Halogen and Carbon—Selenium Bonds  

Synthesis of Product Subclass 4  

Method 1: Selenium(II) Compounds  

Method 2: Selenium(IV) Compounds  

Method 3: Selenium(VI) Compounds  

Applications of Product Subclass 4 in Organic Synthesis  

Method 1: Addition of Trifluoromethaneselenyl Chloride to Ethene  

Product Subclass 5: Compounds with Carbon—Halogen and Carbon—Tellurium Bonds  

Synthesis of Product Subclass 5  

Method 1: Bis(trifluoromethyl) Telluride, Bis(trifluoromethyl)tellurium Dihalides, and Tetrakis(trifluoromethyl)-λ₄-tellane  

Applications of Product Subclass 5 in Organic Synthesis  

Method 1: Trifluoromethylations Using Bis(trifluoromethyl) Telluride  

Product Subclass 6: Compounds with Carbon—Halogen and Carbon—Nitrogen Bonds  

Synthesis of Product Subclass 6
18.15.6.1 Method 1: Mono-, Bis-, and Tris(trifluoromethyl)amine  
18.15.6.2 Method 2: Dimethyl(trifluoromethyl)amine from Dimethylformamide and Sulfur Tetrafluoride  
18.15.6.3 Method 3: N-(Trihalomethyl)anilines  
18.15.6.4 Method 4: Dichloro- and Difluoro(trifluoromethyl)amine  
18.15.6.5 Method 5: (Trifluoromethyl)imidosulfurous Difluoride from Cyanuric Fluoride and Sulfur Tetrafluoride  
18.15.6.6 Method 6: (Difluoromethylene)(trifluoromethyl)amine from Trifluoro(nitroso)methane and Tetrafluoroethene  
18.15.6.7 Method 7: Trifluoro(nitroso)methane, N,N-Bis(trifluoromethyl)hydroxylamine, and the Bis(trifluoromethyl)nitroxide Radical  
18.15.6.8 Method 8: Trifluoro(nitro)methane, Difluorodinitromethane, and Fluorotrinitromethane  
18.15.6.9 Applications of Product Subclass 6 in Organic Synthesis  
18.15.7 Product Subclass 7: Compounds with Carbon—Halogen and Carbon—Phosphorus Bonds  
18.15.7.1 Synthesis of Product Subclass 7  
18.15.7.2 Applications of Product Subclass 7 in Organic Synthesis  
18.16 Product Class 16: Other Tetraheterosubstituted Methanes

### Product Subclass 6: Orthocarbonic Acid Diester Diamides

**Dialkoxydiaminomethanes** .......................................................... 1220

#### Method 1: Substitution Reactions of Halomethanes .......................... 1222

##### Variation 1: Substitution Reactions of 3-Alkoxy-3-chlorodiazirines with Alkoxides .......................................................... 1222

##### Variation 2: Unsymmetrical Dioxadiazipaspirans by Substitution Reactions of 2,2-Dihaloacetals with Amines .............................. 1222

#### Method 2: Symmetrical Dioxadiazipaspirans by Desulfurization of Carbon Disulfide or N-Alkylthiocarbamates with Amino Alcohols .... 1223

#### Method 3: Addition of Alkoxides to Uronium and Formamidinium Salts 1224

#### Method 4: Oxidation of Dihydroimidazole N-Oxides ....................... 1225

#### Method 5: Oxidation of Acetone Semicarbazones ............................ 1225

#### Method 6: Symmetrical Dioxadiazipaspirans from Dialkylcarbodiimides . 1226

#### Applications of Product Subclass 6 in Organic Synthesis ................... 1227

**Dialkoxydiazirines and Amino(oxy)dihydrooxazoles as Dialkoxy carbene Precursors** .......................................................... 1227

### Product Subclass 7: Dialkoxybis(phosphino)methanes and Dialkoxybis(phosphoryl)methanes ........................................ 1228

#### Method 1: Substitution Reactions of Dichloroacetals with Trialkyl Phosphites .......................................................... 1229

#### Method 2: Hydrates of Carbonyldiphosphonates .............................. 1230

### Product Subclass 8: Trithioorthocarbonic Acid Tetraesters

**[Alkoxytris(organosulfanyl)methanes]** .................................. 1230

#### Method 1: Addition of Alkoxide to Sulfanylcarbenium Salts ............... 1231

#### Method 2: Cycloaddition of Thiocarbonyl Compounds ....................... 1231

#### Method 3: Oxatrithiaspirans by Addition of Epoxides to 1,3-Dithiolane-2-thiones .......................................................... 1232

#### Method 4: Thermal Decomposition of Bisdithiocarbonates .................. 1233

### Product Subclass 9: Alkoxytriaminomethanes and Alkoxytrinitromethanes .......................................................... 1234

#### Method 1: Addition of Alkoxides to Hexaalkylguanidinium Chlorides ... 1235

#### Method 2: Heterocyclic Derivatives by Cycloaddition Reactions ............ 1236

### Product Subclass 10: Tetrathioorthocarbonic Acid Tetraesters

**[Tetrakis(organosulfanyl)methanes], Bis(organosulfanyl)bis(organosulfinyl)methanes, Tris(organosulfanyl)(organosulfonyl)methanes, and Bis(organosulfanyl)bis(organosulfonyl)methanes** .................. 1237

#### Synthesis of Product Subclass 10 ............................................. 1238

#### Method 1: Substitution Reactions of Halomethanes with Thiolates ....... 1238
18.16.10.1.2 Method 2: Substitution Reactions of Tris(organosulfanyl)methylithium Compounds and Bis(organosulfanyl)methanes ............. 1239

18.16.10.1.2.1 Variation 1: Substitution Reactions of Tris(organosulfanyl)methylithium Compounds with Diorgano Disulfides .......................... 1240

18.16.10.1.2.2 Variation 2: Reaction of Bis(alkylsulfanyl)methanes with N-(Organosulfanyl)phthalimides .......................... 1240

18.16.10.1.3 Method 3: Addition of Thiols to Sulfanylcarbenium Salts .............. 1241

18.16.10.1.4 Method 4: Tetrathiaspirans from Dithiolane-2-thione or Carbon Disulfide by Addition Reactions ................. 1242

18.16.10.1.5 Method 5: Transesterification of Tetrathioorthocarboxylic Acid Tetraesters with Dithiols .......................... 1243

18.16.11 Product Subclass 11: Trithioorthocarboxylic Triesters [Aminotris(organosulfanyl)methanes] and Nitrotris(organosulfanyl)methanes .......................... 1243

18.16.11.1 Synthesis of Product Subclass 11 ......................................... 1244

18.16.11.1.1 Method 1: Addition of Thiolates to Carbamidium Salts and Amines to Sulfanylcarbenium Salts .......................... 1245

18.16.11.1.2 Method 2: Nitration of Tris(organosulfanyl)methanes .......................... 1246

18.16.12 Product Subclass 12: Tris(alkylsulfanyl)phosphorylmethanes .......................... 1247

18.16.12.1 Synthesis of Product Subclass 12 ......................................... 1247

18.16.12.1.1 Method 1: Reaction of Phosphoryldithioformates with Organometallics .......................... 1247

18.16.13 Product Subclass 13: Dithioorthocarboxylic Acid Diamide Diesters [Diaminobis(organosulfanyl)methanes] and Bis(arylsulfanyl)-dinitromethanes .......................... 1248

18.16.13.1 Synthesis of Product Subclass 13 ......................................... 1249

18.16.13.1.1 Method 1: Substitution Reactions of 2,2-Dichloroimidazolidine-4,5-diones with Organothiols .......................... 1250

18.16.13.1.2 Method 2: Ring Closure of Iminodithiocarbonates and Thioureas .......................... 1250

18.16.13.1.3 Method 3: Cycloaddition of Thiocarbonyl Compounds with Nitrilimines .......................... 1251

18.16.13.1.4 Method 4: Reaction of Sulfenyl Halides with Dinitro Ylides .......................... 1252

18.16.13.1.5 Method 5: From Heterocyclic Aminals .......................... 1253

18.16.14 Product Subclass 14: Bis(alkylsulfanyl)- and Bis(alkylselanyl)-bis(phosphino)methanes and -bis(phosphoryl)methanes .......................... 1254

18.16.14.1 Synthesis of Product Subclass 14 ......................................... 1254

18.16.14.1.1 Method 1: Reaction of Metalated Phosphines or Phosphorines with Carbon Disulfide .......................... 1254

18.16.14.1.2 Method 2: Dimerization of Bis(alkylsulfanyl)methylene]phosphines .......................... 1255

18.16.14.1.3 Method 3: Sulfenation of Bis(phosphoryl)methanes .......................... 1256

18.16.15 Product Subclass 15: Thio- and Selenoorthocarboxylic Acid Triamide Esters [Triamino(organosulfanyl)- and Triamino(organoselanyl)methanes] and Trinitro(organosulfanyl)- and Trinitro(organoselanyl)methanes .......................... 1257

18.16.15.1 Synthesis of Product Subclass 15 ......................................... 1257

18.16.15.1.1 Method 1: Addition of Amines to Thioureas or Isothioureas .......................... 1257
18.16.15.1.2 Method 2: Cycloaddition of Thioureas and Isothioureas with Isocyanates .............................................. 1258
18.16.15.1.3 Method 3: Substitution Reactions of Metalated Methanes with Sulfenyl and Selenenyl Halides ........................................ 1260
18.16.16 Product Subclass 16: Tetraselenoorthocarbonic Acid Tetraesters
[Tetrakis(alkylselanyl)methanes] .................................................. 1261
18.16.16.1 Synthesis of Product Subclass 16 ........................................ 1261
18.16.16.1.1 Method 1: Substitution Reactions of [Tris(organoselanyl)methyl]lithium Reagents with Diorganodiselenenyl Compounds ......... 1261
18.16.17 Product Subclass 17: Orthocarbonic Acid Tetraamides
[Tetrakis(dialkylamino)methanes] and Tetranitromethane .............. 1262
18.16.17.1 Synthesis of Product Subclass 17 ........................................ 1263
18.16.17.1.1 Method 1: Substitution of Halomethanes with Amines ............. 1263
18.16.17.1.2 Method 2: Tetrakis(dialkylamino)methanes from Formamidine Salts by Addition of Metalated Dialkylamines ......................... 1265
18.16.17.1.3 Method 3: Tetraaminomethanes from Cycloaddition Reactions .... 1265
18.16.17.1.4 Method 4: Tetranitromethane from Trinitromethane Derivatives by Nitrination ...................................................... 1266
18.16.17.2 Applications of Product Subclass 17 in Organic Synthesis ................. 1267
18.16.17.2.1 Method 1: Nitrations using Tetranitromethane ....................... 1267
18.16.18 Product Subclass 18: Aminotris(phosphoryl)methanes .................... 1268
18.16.18.1 Synthesis of Product Subclass 18 ........................................ 1269
18.16.18.1.1 Method 1: Substitution Reactions of (Trihalomethyl)amines with Trialkyl Phosphites ............................................... 1269
18.16.19 Product Subclass 19: Tetrakis(phosphanyl)methanes,
Tetrakis(phosphinoyl)methanes, and Tetrakis(phosphoryl)methanes .... 1270
18.16.19.1 Synthesis of Product Subclass 19 ........................................ 1271
18.16.19.1.1 Method 1: Reactions of Carbon Tetrachloride ......................... 1271
18.16.19.1.1.1 Variation 1: With Chlorodimethylphosphine ....................... 1271
18.16.19.1.2 Variation 2: By [2 + 1] Cyclocondensation with Dipotassium 1,2-Di-tert-butylphosphide ........................................ 1271
